# FOREWORD I

Nowadays, the 2030 Agenda is a scapegoat. People's lack of understanding of how it actually works and its social aims has created an opportunity that has been seized upon, without hesitation, by those economic and political forces keen to blame all the ills of our time on a greater evil. Sometimes, that greater evil is the 2030 Agenda. This raises the question of what to do about it.

It seems clear that one of the key ways to tackle this disengagement is to address its root cause, namely to communicate what the 2030 Agenda is really about. The Sustainable Development Goals (SDGs) set out fundamental objectives such as living in peace, free from the fear of war, hunger or disease; breathing clean air and ensuring universal access to education; promoting equality between men and women; and combating inequality between social classes. These are the basic precepts of a democratic society that still aspires to uphold values such as equality and welfare.

However, the dissemination of the foundations of the 2030 Agenda is not a matter that rests exclusively with central government. The country in which we live, its territorial organisation, which should be a source of pride because of its proximity to its citizens, offers us a variety of tools to be able to reach all corners. One of the most important of these is the collaboration with local entities, which, in the case of the 2030 Agenda, is what is known as the localisation of the SDGs.

In this regard, the Ministry of Social Rights, Consumption and Agenda 2030 has launched from 2022 to 2025 calls for public subsidies for local and social entities. In total, €74.6 million has been allocated to innovative projects that reflect the 2030 agenda, with initiatives spread across the 17 SDG targets and the national challenges set out in our country's Sustainable Development Strategies, taking into account the specific local characteristics of each region and organisation. In fact, this commitment will be further strengthened in 2026, when we will have €10 million earmarked for social organisations and universities, and a further €6.6 million for local authorities.

It is clear that there is no better way to raise awareness of the 2030 Agenda than through people's everyday experiences. That is why the localisation of the Agenda plays a central role not only in its own implementation of the Goals, but also in shaping the Agenda's image as what it truly is: a national project, a project for the future. This is why this collection of activities is so important; it serves to highlight the rigorous and tireless work carried out by these organisations, and I hope that all your readers will enjoy it and share it widely.

**PABLO BUSTINDUY**

# FOREWORD II

Today, more than ever, the Sustainable Development Goals (SDGs) represent the minimum action plan required to safeguard the most basic common goods for all people and the entire planet. The 2030 Agenda was conceived as an agenda of agendas, building on decades of work to expand rights: human rights, international rights, peace, development, sustainability, women's rights, urban and rural agendas, and more. In short, it is an action plan to tackle major challenges such as ending inequalities, addressing the climate emergency and promoting development for everyone within the planet's limits.

Since the universality of the 2030 Agenda's mandate, plans have been tailored to each country, region and city. Localising the Sustainable Development Goals means making them specific to each territory, according to its own characteristics. This localisation is also essential for progress, as more than two thirds of the objectives depend directly on local and regional policies, on the work in towns and cities of NGOs, citizen platforms, companies and universities.

Our country is at the forefront in advancing the model of sustainable development, which has allowed us to make progress in well-being, as well as in pointing out the challenges we must face in order to maintain this model. We are also at the forefront in the localisation of the 2030 Agenda with the implementation of public policies through the Sustainable Development Strategy, revised in 2026, and plans for autonomous communities and municipalities. The objectives of this strategy are fourfold: to strengthen the welfare state to reduce inequalities; to move towards a fairer economy for all people and the planet; to foster greater territorial and environmental cohesion; and to promote actions for freer and more equal lives in community. These challenges are reinforced by cross-cutting actions to foster policy coherence.

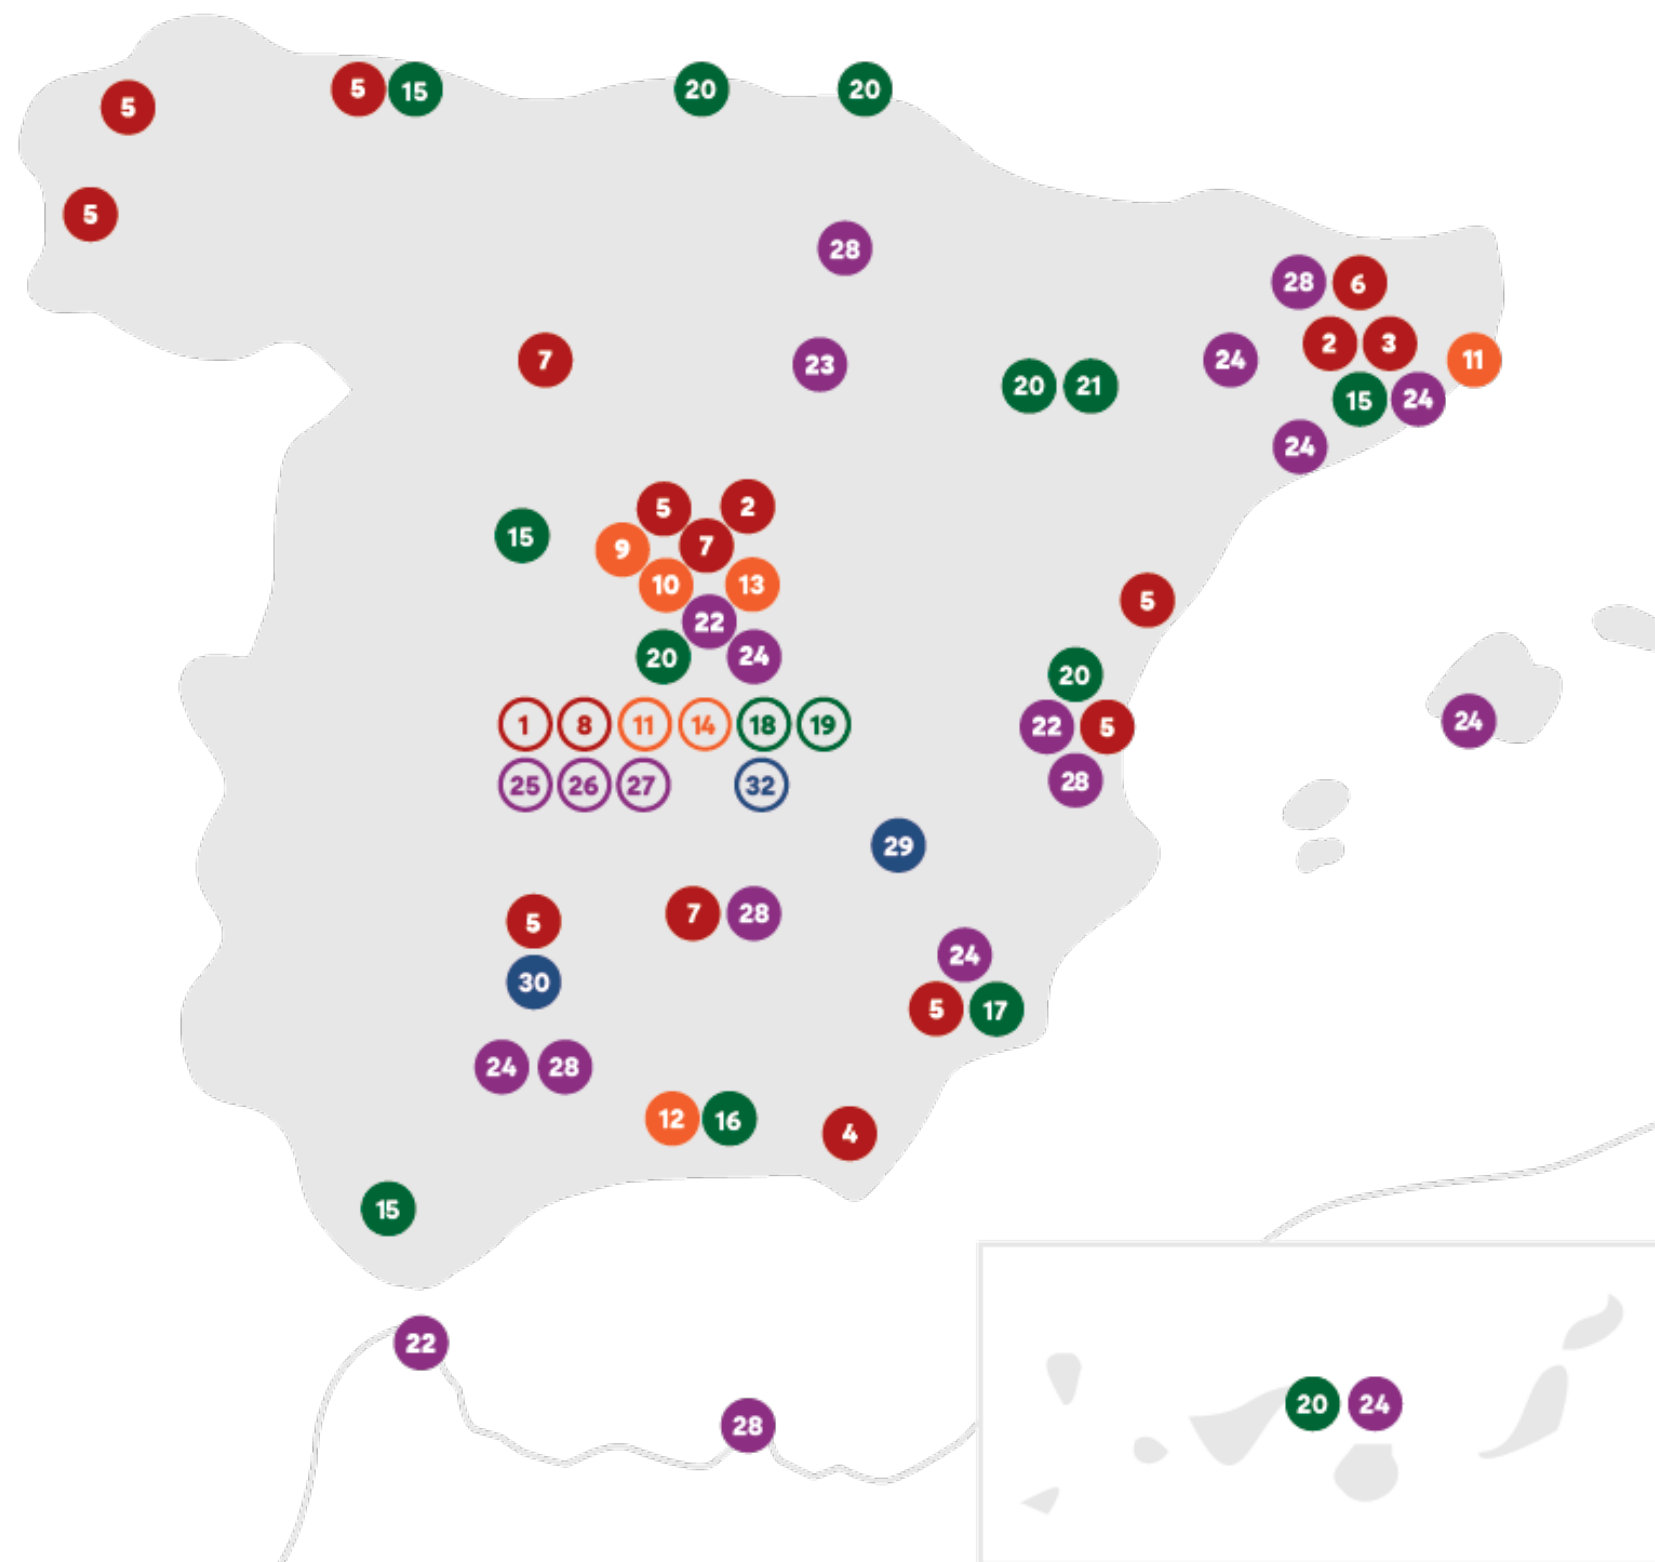

In Spain, local authorities, social organisations and universities are amplifying the impact of the 2030 Agenda through the implementation of innovative projects funded by the Ministry of Social Rights, Consumer Affairs and the 2030 Agenda. From the 17 universal goals of the 2030 Agenda and the country's sustainable development challenges, their innovative actions build common well-being at the limits of our planet. Their promotion through local action multiplies advanced and integrated rights, as all SDGs are interlinked.

In short, from the local to the international level, across all sectors of the country, and from social issues to the strategies and public policies of government bodies, we are building a future of shared prosperity within the planet's limits. Today, social and environmental protection is more necessary than ever to leave no one behind.

# INFORMATION ON GRANTS FROM THE DIRECTORATE-GENERAL FOR THE 2030 AGENDA

The Ministry of Social Rights, Consumption and Agenda 2030, through the General Directorate of Agenda 2030, has established two calls for competitive grants for the implementation of the Agenda 2030 in Spain.

Firstly, the grant programme is aimed at **non-profit social organisations, social economy organisations and universities** for activities related to the promotion and implementation of the 2030 Agenda for Sustainable Development in Spain from 2021 onwards.

On the other hand, there are grants for actions to promote the 2030 Agenda in **Local Entities** in collaboration with the Spanish Federation of Municipalities (FEMP) from 2022.

The objective of both grants is to finance and support projects aligned with the Sustainable Development Goals (SDGs), as well as the localisation of the 2030 Sustainable Development Strategy (SDS2030) in the Spanish territory.

This publication presents a selection of the projects funded by this unit **between 2021 and 2024**. These are examples of best practice in the implementation of the 2030 Agenda in Spain. It is worth noting that between 2021 and 2024, **a total of 404 projects** were funded: 267 projects of social entities and 137 projects of local entities.

Finally, the projects included have been classified according to the five country challenges and the different topic areas associated with them that have been established in the revision of the SDS2030, approved in February 2026.

# CHALLENGE 1

**A STRONG AND UNIVERSAL  
WELFARE STATE TO END  
POVERTY AND INEQUALITY**

# A Roma Perspective on Sustainable Development 2022-2023

## NATIONAL ASSOCIATION FOR THE ROMA COMMUNITY

Nationwide

Image courtesy of the National Association for the Roma Community

The project *La Mirada Gitana del Desarrollo Sostenible* (A Roma Perspective on Sustainable Development), developed by the *Asociación Nacional Presencia Gitana* (National Association for the Roma Community), was born out of the conviction that the Roma People must be protagonists in the implementation and monitoring of the 2030 Agenda and its Sustainable Development Goals (SDGs). It was produced in collaboration with the Federation of Roma Associations of Catalonia (FAGIC) and La Fragua Projects, **joining the efforts and experiences of the Roma associative movement** in different areas of Spain.

Since their foundation, the three organisations have worked to **promote the social, educational and cultural advancement of the Roma community**, fostering their recognition and participation in public policy and forums for social dialogue. In the Sustainable Development Strategy and the implementation of the 2030 Agenda in Spain, the organisations detected an absence of references to the Roma. Despite being the largest minority and one of the most affected by poverty and exclusion, their contribution to the values of equity, sustainability, solidarity and cohesion was not reflected. This situation motivated the organisations to create their own space for thought and action that would translate the global language of the SDGs into the life, cultural and social experience of the Roma.

The project came about through a collaboration between the technical teams at Presencia Gitana, FAGIC and La Fragua Projects, with a view to generating a participatory and creative process. Community dialogue spaces were established in different cities, combining research-action methodologies, training, partnerships and artistic expression, and facilitating the appropriation of the SDGs from a Roma perspective.

The main objective was to reinterpret the **17 SDGs from a Roma perspective**, highlighting this community's contributions to social, cultural and environmental sustainability, and promoting informed public participation in the 2030 Agenda. The project also sought to inspire public administrations to integrate inclusive and culturally sensitive indicators into their sustainable development strategies.

Different activities were carried out for this purpose. In Phase 1, **Roma Rethinking the SDGs**, an expert group was set up to draft the *Roma Rethinking Sustainable Development Report*. A validation workshop was also held in Madrid, attended by 11 organisations from the State Council of the Roma People and a further 16 organisations.

Phase 2, **Awareness raising and advocacy campaign** included 4 public presentations of the Report: at the BBK Kuna (Bilbao), at the municipal library of Sant Adrià de Besòs (with institutional and civil society representatives), at the Factoría Cultural (Seville), with institutional representatives and multiple social entities, and the final event at the Ministry of Social Rights, Consumption and Agenda 2030.

In Phase 3, **Local Alliances for Sustainable Development**, 3 local alliances were created: **Sant Adrià del Besòs** by signing an **Agreement** with 2 main institutional entities and 10 local entities. **Polígono Sur**, through the **Letter of support from local administration** and Cañada Real through a **Seminar** with 10 local entities and activists.

To conclude the proceedings, an event was held in the **Assembly Hall of the Ministry of Social Rights, Consumer Affairs and the 2030 Agenda**, attended by representatives from various institutions, social organisations and prominent activists. The results of the entire project will be presented, followed by a musical performance.

## Lessons Learned and Best Practices

Among the lessons learned and best practices established, we have been able to observe that 83% of participants rated the Report as excellent/very good in satisfaction surveys.

In addition, the creation of the **Roma Sustainable Development Report** has been established as a **methodological reference**, validated by the State Council of the Roma People.

This work has resulted in institutional agreements signed with regional and local public administrations.

The consolidation of the **three organising bodies** as a national benchmark at the intersection of the SDGs and the Roma community has also been noted.

Among the best practices that have been developed as a result of the project: The collective validation of the report by 20 entities of the State Council has served to strengthen the networks created. The use of language adapted to different audiences in the field of digital campaigns allows for more effective and **impactful communication**.

Another best practice is the creation of **multi-sectoral partnerships** that generate lasting institutional commitment. The use of a flexible methodology makes it possible to adapt to different territorial realities. The project has positioned the Roma Community as **active and co-responsible subjects in the 2030 Agenda**, demonstrating that social inclusion is an indispensable condition for sustainable development.

## Horizon 2030

With our sights set on 2030, the organisations that form part of the Asociación Nacional de Presencia focus our action on political advocacy for the full inclusion of Roma in the National Roma Strategy 2030 and the Sustainable Development Strategy 2030; community training for Roma youth and women as agents of sustainable transformation and the strengthening of alliances with administrations, universities and social organisations.

# Municipal helpline for the protection of single-mother households: the Housing Loss Mediation Service and the Care Networks

**BARCELONA HUMAN RIGHTS OBSERVATORY ASSOCIATION (DESCA)**

Barcelona and Madrid

Image courtesy of DESCA

The challenges linked to access to housing and the social organisation of care constitute one of the main structural challenges facing Spanish cities. DESCA's research has identified that **housing crises** disproportionately affect **women with dependent children**, especially in single-mother households, who simultaneously face difficulties in maintaining their housing and reconciling employment and care responsibilities. Given this reality, the organisation considered it necessary to promote a **public policy approach** that connects the right to housing with the **right to care**.

With this starting point, the project proposed the creation of a **helpline** aimed at **Spanish municipalities** to promote innovative public policies to protect these households. In particular, the project focused on **systematising and disseminating two experiences** that have shown positive results in real environments. On the one hand, **the Servicios de intermediación en la pérdida del hogar (SIPH, or Housing Loss Mediation Service in English)**. On the other hand, the project explored the adaptation to the Spanish context of the **Manzanas de Cuidados (Care Networks)** promoted in Bogotá.

The project has been **well received** by its end users—primarily local authorities, social organisations and professionals involved in urban and care policies—particularly due to its ability to **link two areas of public policy** that are usually addressed separately.

The project was implemented through the following activities: **1.** Compilation and analysis of experiences on **Housing Loss Mediation Services (SIPH)** (Barcelona). **2.** Institutional interviews on the **Care Networks** system (Bogotá / virtual format). **3.** Working sessions with organisations **experts in feminist urbanism** and care (Barcelona). **4.** **Interviews** with policy makers and technicians in urban and care policies (Barcelona). **5.** Preparation of the guide for implementing the Housing Loss Mediation Services (SIPH) (Barcelona). **6.** Development of a guide for implementing municipal care systems inspired by the *Manzanas de Cuidados* (nationwide). **7.** **Advising** public authorities on housing and care policies (Girona, El Prat de Llobregat, Alella, Fuenlabrada and other municipalities). **8.** Preparation of a **report on the impact of the eviction moratorium** during the pandemic (national). **9.** Organisation of the **Conferences “Cities have a woman’s name”** (Madrid and Barcelona).

## Lessons Learned and Best Practices

The project has **generated practical knowledge** in two key areas for gender-sensitive local policies: **preventing people from losing their homes** and **developing public care support systems** at local authority level.

The **report on the moratorium on evictions** has been established as the basis for policy advocacy and networking with organisations nationwide. In addition, the systematisation of the 2 reports on Housing Loss Mediation Services (SIPH) and another on care inspired by the *Manzanas de Cuidados* model have provided guidance for municipal services.

Likewise, the **conferences** organised within the framework of the project were consolidated as **relevant spaces** for exchange between public administrations, social organisations and specialists in urban policies. In particular, the conference ‘*Women Against Evictions and Policy Instruments*’, held in Barcelona, highlighted the central role of **women** in the **struggle for the right to housing** and provided a forum for discussing institutional tools to prevent homelessness, such as mediation services.

One of the key lessons from the project is the **importance of taking an integrated approach to housing and care policies**, recognising their differing impact on the lives of women and, in particular, single-mother households. **The key role that local governments can play** both in preventing situations of residential exclusion and in promoting proximity care networks has also been noted.

Finally, the project has contributed to **consolidating work methodologies based on applied research, dialogue with institutional and social actors and the development of practical tools** aimed at influencing public policies, thus reinforcing the organisation’s capacity to continue promoting initiatives in these areas.

## Horizon 2030

The organisation will continue to focus its work on preventing evictions and supporting vulnerable families, with special attention to women and children. Its strategy is based on networking with other entities and community organisations, using care as a tool for social advocacy to promote inclusive local policies and effective responses to residential exclusion.

# BASSA

## ASSOCIACIÓ SAÓPRAT

Barcelona and El Prat de Llobregat

Image courtesy of Associació SaóPrat

The project was launched in 2015 as an initiative of the Associació SaóPrat, in partnership with El Prat de Llobregat Town Council. The idea arose when it became clear that early school leaving and repeating a year were persistent problems, compounded by a local survey which revealed that 30% of young people felt unmotivated to attend secondary school and 40% did not enjoy learning. Faced with this reality, the **need** arose for **support** that went beyond academic results, taking into account the **diverse circumstances of young people**.

Bassa is promoted through constant coordination with the municipality's educational agents, including secondary schools, primary schools, social services and the *Pla Educatiu d'Entorn* (PEE). This structure makes it possible to align the territory's resources specifically for each young person.

Its primary aim is to offer a **comprehensive and community-based response** to help the adolescents and young people of El Prat to be able to sustain and overcome their academic and educational process successfully and autonomously. In addition, it explicitly seeks to compensate for inequalities of origin (economic, social and cultural) and to prevent early school leaving through academic reinforcement and emotional support.

Participants are not mere recipients, but active agents involved in the design and organisation of activities. They participate directly in the elaboration of their Individual Learning Plan together with the educators and express their needs so that the programming of the sessions is adapted to them.

This methodology fosters their autonomy, commitment and motivation towards their own educational process.

The project consists of the following activities to achieve its objective:

- **Educational reinforcement sessions in Compulsory Secondary Education (ESO):** They are held at the SaóPrat headquarters. These are two-hour group sessions in the afternoon (Monday to Thursday) where they work on study techniques, basic skills and motivation.
- **Individual tutoring:** Spaces for personalised accompaniment to address emotional well-being, self-exploration of potential and academic guidance.
- **Reception of expelled ESO students (sanctioned):** Morning resource for young people temporarily sanctioned by their high schools. The aim is to ensure that they complete their academic tasks and to offer them a **space for reflection and listening** in order to prevent them from dropping out of school.
- **Reinforcement for post-compulsory studies:** Free support for young people between 16 and 22 years of age who are studying at Baccalaureate, Vocational Training or PFI training programmes.
- **Group and community activities:** Outings and workshops held in different facilities in the territory (libraries, civic centres, natural spaces) to promote positive leisure, group cohesion and citizen participation.
- **Networking and coordination:** Regular meetings with high schools, schools, social services and the *Plan Educativo de Entorno* (PEE) to ensure a coherent intervention and a comprehensive follow-up of each young person.

## Lessons Learned and Best Practices

The project has led to a significant increase in **pupils' independence and motivation**. An **improvement in emotional well-being** and socialisation skills through community participation is observed. In addition, students have consolidated their use of the Catalan language through meaningful and experiential learning. It highlights the change in young people's self-perception from passive recipients to active citizens through learning and service projects.

Furthermore, among the **best practices** identified are **co-production and networking**: the strategic partnership with the local council and weekly coordination with secondary schools, social services and the PEE (Educational Environment Plan) ensure a coherent and systemic approach. This approach also places the young person at the centre of their own learning process through their **participation**, enabling them to work with their teachers to draw up their own Individual Learning Plan. **Intersectional gender analysis** through the use of innovative tools such as Relief Maps to reflect on social inequalities and the creation of spaces free from sexist stereotypes.

Finally, the **restorative management of expulsion** is a resource for sanctioned students that transforms punishment into a space for listening, reflection and accompaniment, preventing the young person from being left unattended and facilitating their return to the educational system.

## Horizon 2030

The organisation aligns its work with the 2030 Sustainable Development Strategy, prioritising the compensation of inequalities of origin (economic, social and cultural) to ensure educational success and equity. Its vision focuses on consolidating a strong, interdisciplinary community network that acts as a protective factor for the mental health and emotional well-being of young people. It also integrates environmental sustainability into its management and is committed to diversifying its partnerships with companies and citizens to ensure a lasting social impact on the territory.

# COMUNIGUALES

## Building resilient communities based on inclusion and equality by acting in disadvantaged neighbourhoods

ALMERÍA CITY COUNCIL

Almería

The project *COMUNIGUALES: Building resilient communities based on inclusion and equality by acting in disadvantaged neighbourhoods* arose within Almería City Council in response to a need detected in different vulnerable neighbourhoods in the municipality, characterised by **the existence of social inequalities, integration difficulties and limitations in access to educational, employment and community opportunities.**

It is a comprehensive project to promote equality and social integration in vulnerable neighbourhoods of Almería, seeking to improve coexistence and spatial integration of neighbourhoods in the city through the implementation of the 2030 Agenda and the SDGs, and raising awareness among citizens.

The project was driven by the cross-cutting collaboration of different areas of the City Council, which made it possible to design a coordinated and multidisciplinary intervention. The participation of social entities, neighbourhood associations and local agents was also promoted, favouring a participatory governance approach.

The aim of **COMUNIGUALES** was to promote **equality, social integration and cohesion between neighbourhoods**, by generating meeting spaces, eliminating stereotypes, strengthening community networks and improving the quality of life of the population living in disadvantaged areas.

To this end, a set of actions was designed covering a variety of areas:

Firstly, the **Weaving networks against inequality** service has been carried out. This initiative included activities to support work-life balance and maternity, specific workshops aimed at women, initiatives to promote community resources, and career guidance and training programmes for vulnerable groups, particularly young people.

Secondly, the **Integration days for families** in areas adjacent to disadvantaged neighbourhoods, held in municipal spaces close to the El Puche neighbourhood. These days included environmental workshops (identification of urban fauna and composting), recreational and sporting activities such as family gymkhanas, as well as cultural workshops, including a flamenco dance workshop.

Thirdly, the **Art in peripheral neighbourhoods** activity was carried out in the Los Almendros neighbourhood. This initiative consisted of the participatory creation of artistic murals in collaboration with a local artist. Likewise, the awareness campaign **COMUNIGUALES**, has been carried out throughout the municipality of Almería.

Finally, the **Laboratory for the revitalisation of recreational spaces in vulnerable neighbourhoods (COMMUNITYLAB)** has been developed in the El Puche neighbourhood.

## Lessons Learned and Best Practices

The most significant results focus on the **improvement of social cohesion**, the strengthening of the feeling of belonging to the community and the generation of spaces for positive coexistence between neighbourhoods. Particularly relevant has been the **empowerment of women** through specific spaces for participation, as well as the improvement of the employability of people in vulnerable situations through training and guidance actions. Similarly, the recovery of degraded public spaces has favoured their continued use by citizens, generating dynamics of coexistence and community care.

As regards the **best practices** identified, one of the most notable is the adoption of a **comprehensive and cross-cutting approach**, which has made it possible to tackle inequality from multiple angles (social, educational, cultural, environmental and community-based) through the coordination of various municipal departments. This working model has proven to be effective in maximising the impact of interventions.

Secondly, the **active participation** of citizens has been consolidated as a central element of the project.

Another relevant good practice has been the **generation of community networks** and spaces for mutual support, which have continued to function after the end of the project, as in the case of women's groups or neighbourhood collaboration dynamics. This element brings high value in terms of sustainability and medium-term impact.

Likewise, the effectiveness of combining public management with the collaboration of specialised external agents has been demonstrated, allowing a more agile execution of activities without losing the capacity for coordination and supervision by the City Council.

Finally, the project has highlighted the importance of large-scale social awareness-raising as a complement to direct interventions, helping to generate a change in citizens' perception of inequality, integration and coexistence.

## Horizon 2030

Almería City Council focuses its efforts on consolidating comprehensive, participatory and sustainable community intervention models, in line with the 2030 Agenda. Within this framework, the aim is to give continuity to and expand initiatives such as COMUNIGUALES, reinforcing the community networks created, citizen involvement and coordination between municipal areas. Furthermore, there is a commitment to ensuring that these initiatives can be replicated in other neighbourhoods and to promoting public policies that effectively contribute to reducing inequalities, fostering social cohesion and improving quality of life at a local level.

# OLIVO PROJECT

## intervention with the prison population over 65 years of age - olivo project

### SPANISH PRISONERS' ASSOCIATION (CONCAES)

Madrid, Valencia, Castellón, Murcia, Coruña, Pontevedra, Asturias and Cordoba

The **Olivo Project** was launched by CONCAES as an essential response to the progressive ageing of the Spanish prison population and the vulnerabilities faced by older people in prison. Through our ongoing work in various prisons over more than 30 years, we have observed how the increase in the number of inmates aged over 60 has created an urgent need for **specific care**.

These people often live in loneliness, with few family ties, physical and cognitive limitations, and a strong emotional impact from isolation. Based on this initial diagnosis, the organisation designed a pilot project with a clear objective: **to improve the quality of life of elderly people in prison** through a comprehensive, active and humanised intervention.

The aim of this project was to provide a structural response to this reality and for the **Olivo Project** to be a replicable model combining prevention of cognitive and physical deterioration, emotional support, reduction of the digital divide and strengthening of social and family ties.

Furthermore, from the outset, it was envisaged that the experiences gathered would be used to produce an intervention manual in collaboration with the General Secretariat for Prisons.

To carry out this project, activities were organised in thirteen prisons located across five autonomous communities.

Among the actions implemented were **workshops for the prevention of cognitive deterioration**, through reading, writing, debate and cognitive stimulation sessions. In these activities, various cognitive aspects were worked on: memory, attention, language, executive functions and social skills adapted to individual abilities. In addition, **prevention workshops on physical deterioration** focused on maintenance gymnastics, mobility, coordination and gentle exercises aimed at improving functional autonomy. Adapted physical activity reduced the prevalence of sedentary lifestyles in the older inmate population and contributed to improved vitality, balance and pain management.

The **prevention of social deterioration** was addressed through activities that strengthened bonding and alleviated loneliness. The **Support and Communication workshop** facilitated calls, correspondence and emotional accompaniment by professionals and volunteers, especially for people without a family network. **Digital literacy sessions were also held in eight prisons**, with the aim of bridging the digital divide and preparing older people for the digital procedures essential to their reintegration process.

Finally, individual **psychological support** sessions were provided.

## Lessons Learned and Best Practices

At an **institutional** level, the treatment teams acknowledged the programme's contribution both to the **individual well-being** of the inmates and to **improving** the overall **atmosphere** within the facility.

Among the **lessons learned and best practices** from the project, as expressed by the participants, are the following:

- Activities designed to foster **interpersonal relationships** led to noticeable improvements among the older prison population. The social skills workshops and film forum facilitated spaces for dialogue, listening and positive coexistence. Thanks to them, **bonds were strengthened between participants** and dynamics of respect, empathy and collaboration were developed.
- **Introducing activities such as group reading, discussions and problem-solving** helped them feel more mentally **alert** and more confident in their day-to-day lives at school.
- The workshops aimed at managing emotions played a very important role. The participants said that these spaces offered them **comfort, companionship** and the chance to share their concerns without feeling judged, as they foster **mutual support**.
- The work **on physical well-being**, in combination with the other aspects of the health domain, resulted in improved agility, coordination and a general sense of vitality.
- Participants highlight that the workshops made them "feel alive", "broke the routine", "brought excitement" or "allowed them to learn new things".
- One of the most valuable lessons learned was the strong sense of ownership that the project generated. Some **95% of those who took part** said they would like to **continue participating and see the range of activities expanded**.

## Horizon 2030

CONCAES is looking towards 2030 with the intention of extending the *Olivo Project* to as many prisons as possible, reinforcing the prevention of deterioration, digital access and the creation of community networks that accompany reintegration. The aim is to contribute to a more humane prison system, where age is taken into account in public policies and where older people can grow old accompanied, active and with real opportunities for well-being and social reintegration.

# NODUS

## Support network against unwanted loneliness

INSTITUTE OF ROBOTICS FOR DEPENDENCY

Catalonia

Image courtesy of Institute of Robotics for Dependency

The origin of the project dates back to 2021, when the Institute of Robotics for Dependency (IRD) launched the original initiative under the title ***Always with you - Community action platform for mental health.***

The initial objective was born out of the strategic need to **combat unwanted loneliness and social isolation**, critical factors that negatively impact on the physical and mental health of older people.

The project has evolved into its current structure, **NODUS - Support network against unwanted loneliness**, a community support network that combines an advanced socio-technical platform with human and community intervention, seeking a rapid and effective impact to prevent people at risk of unwanted loneliness still independent in their own homes from becoming dependent and having to be institutionalised.

Specifically, **NODUS** is a digital ecosystem capable of proactively identifying older people at risk of unwanted loneliness through validated screening tools and scales, thereby producing a report on their actual condition.

Once their current situation has been assessed through an in-person visit, the professional responsible for supervising the beneficiary draws up **Personalised Support Plans (PSPs)** that coordinate the joint efforts of local councils, social services and a network of volunteers to provide a comprehensive response designed to improve their present and future beyond the supervision period, by changing habits, expanding their social circle and improving their state of mind.

As such, the platform acts as a **bridge that facilitates referral, support and active social inclusion**, preventing administrative overload and duplication of effort within public services.

The following actions have been carried out as part of the project:

- **Pilot programme implementation:** Deployment of the support network for lonely people over 65 years old.
- **Proactive detection and diagnosis:** Screening of participants and conducting initial surveys using scientific indicators to establish the intervention baseline.
- **Configuration of the technological platform:** Adaptation of the **NODUS** models for the detection of risk patterns and the management of referrals to social services, with a total of 4 versions.
- **Creation of the Community network:** Organisation of information sessions and working groups with local councils, social entities and providers of local activities to integrate them into the platform.
- **Implementation of more than 2500 Personalised Support Plans (PSP):** Home visits, face-to-face accompaniment to network activities and continuous emotional support with more than 2000 concrete activities carried out within the framework of the project.

## Lessons Learned and Best Practices

The work carried out through the support plans has achieved a decrease in the feeling of loneliness and a clear increase in the social and community participation of the participants. This leads to increased personal autonomy, self-esteem and a general improvement in emotional and physical health. As well as the prevention of sedentary lifestyles and a reduced need for emergency interventions or costly resources from public services.

The **best practices** identified include:

- **The combined use of socio-technical technology and human community intervention** improves the efficiency of social intervention between published local resources and the needs of the elderly.
- **Establishing systematic follow-up and community reinforcement** helps to consolidate social habits and bonds.
- **The use of specific technologies helps to avoid duplication of actions by professionals on the same person.** NODUS (formerly Siempre Contigo (Always With You)) registers all the actions carried out on the beneficiary, putting in communication all the professionals and community agents that offer their products or services, a joint information that avoids duplication of actions.

## Horizon 2030

NODUS is a scalable platform that evolves through feedback from professionals and users to proactively combat loneliness. Our goal is to consolidate a replicable model nationwide that drives social transformation based on data and person-centred care. By enhancing autonomy and social networks, *NODUS* optimises public management, avoids institutionalisation and guarantees an independent and connected life for our elderly.

# Ecosalud and Agenda 2030

FUNDACIÓN VIVO SANO

Zamora, León, Palencia, Madrid, Guadalajara and Toledo

Image courtesy of Fundación Vivo Sano

**Ecosalud 2030** is part of the **Environmental Health in Schools (SAE)** programme, an initiative of the Vivo Sano Foundation aimed at raising awareness of the relationship between the environment and health, working in schools and other areas of public awareness.

The project aims to reduce children's exposure to environmental risks by **promoting healthy lifestyle habits from an early age**. It also aims to raise awareness of the relationship between environment and health and to contribute to improving the present and future health of the population. All this by promoting a health-promoting educational model that is transferable to different contexts.

The project is primarily aimed at educational institutions at all levels, from early years education to higher education, including vocational training and adult education, and involves the **entire educational community**: pupils, teachers and families. It also incorporates professionals from the educational, health and environmental fields, and broadens its scope through awareness-raising actions open to the general public.

The intervention is articulated through educational workshops with a playful component, informative talks, presence at events and visual and practical teaching resources adapted by age; and support material for teachers, with interesting and up-to-date content related to environmental health. This is complemented by training initiatives, a **nationwide collaboration network and a web platform**. It is also supported by a specialist committee and a media and social media strategy.

The initial aim is to establish a **national network for education and action specialising in environmental health**, enabling the integration of content and resources across all stages of education, including informal settings, given their potential for transformative learning. This reinforces the understanding of the close relationship between environmental quality and human well-being, a connection that provides a solid foundation for promoting healthy and sustainable habits among citizens.

As a conceptual and methodological basis, the programme is based on critical and transformative education, promoting a solid understanding of the relationship between environment and health, based on scientific evidence and social reflection. This is how an inclusive, innovative educational model is shaped, one that has the genuine potential to improve quality of life and well-being, particularly for children.

Within this framework, Ecosalud 2030 emerges as a backbone project that brings together the accumulated experience of the *Environmental Health in Schools* programme and projects it under an approach aligned with the environmental determinants of health and the Agenda 2030.

The following activities were carried out within this area: Design of the multilevel educational programme and the pedagogical and awareness-raising resource kit. A number of publications have been produced, including the public information guide ***Cuida tu entorno, protege tu salud*** (Look after your environment, protect your health) and the activity guide ***Activar conCiencias***. In addition to various training initiatives such as the **“Ecosalud Challenge: Connect, Discover and Take Action” workshop** for vocational training students, CEPAS members and the general public, as well as the **“Educando ConCiencias” e-learning course** and the **“Ecosalud 2030 – Environmental Health in Schools” workshops**.

The Green Initiatives Competition was also held. The Ecosalud Innova Local competition addresses the need to foster an eco-friendly culture and encourage active community involvement in tackling today’s environmental and health challenges.

## Lessons Learned and Best Practices

One of the key strengths of Ecosalud is that it builds on the existing experience of the “Environmental Health in Schools” programme and the team at the Vivo Sano Foundation. Added to this is the opportunity provided by the **generation of alliances** with entities and professionals in the educational, health and environmental fields, which contribute scientific rigour and pedagogical quality.

The project has consolidated an **efficient and scalable model**, based on the generation of **open resources, the development of its own educational network, the training of new trainers and the coordinated work with specialised profiles**.

It is also bolstered by the involvement of the educational community as key players in raising awareness and promoting environmental health from an early age.

## Horizon 2030

The entity aims to consolidate a nationwide network of environmental health education, extending its reach to new regions, especially in rural areas. This progress will be based on: training new trainers; updating content and incorporating innovative methodologies and resources; and adapting the programme to special education contexts to ensure inclusion. This work will be reinforced through partnerships with educational centres, administrations, universities and social entities, together with a financial sustainability strategy that ensures its continuity and scalability, expanding its real impact on health and well-being; and promoting a conscious and sustainable culture aligned with the Agenda 2030 and the SDGs.

# Promoting a child rights-based approach and the 2030 Agenda in the new parliamentary term

## CHILDREN'S ORGANISATIONS PLATFORM

Nationwide

Image courtesy of Children's Organisations Platform

In 2024, the Children's Platform developed the project *Promoting a child rights-based approach and the 2030 Agenda in the new parliamentary term*.

The initiative arises from the **policy advocacy** work that the network carries out on an ongoing basis to promote the inclusion of a children's rights approach in public policies. At the start of a new legislature, the Children's Platform identified a key opportunity to place children's policies at the centre of the political and institutional agenda, linking them to the fulfilment of the 2030 Agenda and the implementation of the Sustainable Development Strategy.

Protecting, promoting and guaranteeing children's rights is fundamental to achieving the Sustainable Development Goals (SDGs). In this regard, the project addressed priority areas such as **children's right to a healthy environment**, the rights of **migrant children**, the right to child-friendly **reconciliation**, access to **healthy food** and the right to live in **safe and protective environments**.

The context in which the project takes place highlights important challenges for child welfare in Spain. Child poverty is one of the main structural challenges that needs to be addressed. In 2024, Spain was the EU country with the highest child poverty rate. In 2025, the AROPE rate in childhood reached 33.3%, the highest among age groups. Furthermore, 28.4% of children were at risk of poverty, and 43.4% of children in single-parent households were living in poverty.

These challenges are compounded by other problems such as the high level of school segregation, one of the highest in Europe, the increase in reports of violence against children and adolescents and the growing impact of extreme weather events, which particularly affect children. These circumstances limit the opportunities for the full development of children and adolescents and reinforce the need to promote public policies focused on their rights.

The project primarily targeted policy makers, public administrations, civil society organisations and society at large, as well as children and adolescents.

The project activities were carried out nationwide and were structured around three specific objectives.

- Contribute to **placing the 2030 Sustainable Development Strategy** as a priority on the political and institutional agenda of the new legislature through **children's policies**: a conference on quality and equity in nursery schools, the development of awareness-raising materials and a participatory process with children were carried out.
- Contribute to the **generation of proposals** for the improvement of public policies through reports and analyses on the fulfilment of children's rights and the 2030 Agenda: Among others, documents were produced on recommendations addressed to the Spanish Government in the framework of COP29, the position on the regulation of school canteens, the drafting of the document of proposals for the regulation of advertising of unhealthy food aimed at children and adolescents, among others.
- Raising public **awareness** of the 2030 Agenda for Sustainable Development and children's rights.

## Lessons Learned and Best Practices

The project raised the visibility of key children's rights issues such as family reconciliation, healthy eating, protection from violence, migrant children's rights and the impact of climate change on children.

The project has strengthened:

- The inclusion of the **child rights approach** in advocacy linked to the 2030 Agenda. The Children's Platform submitted inputs to the review of the Sustainable Development Strategy, to meet the commitments of the 2030 Agenda, which started work in 2024. The new strategy has taken into account these contributions on the issue of child poverty, school dropouts, investment in education, among other issues.
- The development of advocacy actions, communication and participation of different experts for the elaboration of the aforementioned positions and materials. For example, the work on healthy eating has helped the work on the development of RD 315/2025 and the work on banning advertising of unhealthy foods to children.
- The **direct involvement of children and adolescents** in the issues that affect them, through participatory processes and the creation of proposals.

## Horizon 2030

The Children's Platform focuses its work on the consolidation of public policies that fully guarantee children's rights in Spain by 2030. To this end, it will continue to promote the inclusion of the child rights approach in the 2030 Agenda, strengthening political advocacy, child participation and the generation of knowledge that contributes to reducing child poverty, inequalities and situations of vulnerability that affect children and adolescents.

# CHALLENGE 2

**CIRCULAR ECONOMIC SYSTEM  
THAT GENERATES WELFARE  
AND SOCIAL, LABOUR AND  
ENVIRONMENTAL JUSTICE**

# Enredándonos

## State network of agroecology and school food culture

GRUPO COOPERATIVO TANGENTE AND CERAI

Nationwide

Image provided by Grupo Tangente and CERAI

The project *Enredándonos, State network of agroecology and school food culture* builds on the previous experience of the Grupo cooperativo Tangente and CERAI in the field of agroecology, environmental education and the promotion of sustainable food systems. In this review, both organisations identify the existence of numerous initiatives relating to school vegetable gardens and food education across the country, with a wide variety of approaches and levels of development.

The project was designed as a multi-stage process, aimed at progressively moving towards greater articulation of the sector. Within this framework, the first phase (2025) was proposed as a stage of exploration and construction of a common framework for the promotion of agroecology and school food culture as a lever of change for the fulfilment of the 2030 Agenda. This phase focused on compiling existing initiatives, identifying key stakeholders, analysing issues and challenges, and highlighting best practices.

The driving mechanisms have combined the development of a **national assessment**, the collection of information through educational institutions and programmes, the analysis of regulatory frameworks, and the identification and mapping of relevant initiatives.

Likewise, **meeting spaces** oriented towards contrast and collective construction were organised, including the 3rd National Conference on Agroecological School Gardens and School Food Culture, in which progress was made in the participatory drafting of a manifesto for school agroecology, and a meeting with the Network of Municipalities for Agroecology, focused on the exchange of experiences and good practices at the local level.

The project has been articulated through the following activities:

- **Assessment and nationwide mapping of school agroecology initiatives:** Conducting a nationwide assessment focused on identifying and characterising school agroecology initiatives, with particular attention to the involvement of educational communities and the geographical distribution of these initiatives, as well as identifying challenges and opportunities.
- **3rd National Conference on Agroecological School Gardens and School Food Culture:** Organisation of a nationwide meeting place aimed at exchanging experiences, collective reflection and strengthening the sector.
- **Meeting with the Network of Municipalities for Agroecology.**

## Lessons Learned and Best Practices

Among the lessons learnt from this experience, we can highlight that **school vegetable gardens** are a well-established **educational tool** in a wide range of educational settings, with positive impacts on pupil motivation, improved eating habits, an understanding of agri-food systems, and the strengthening of community involvement. In many schools, the vegetable garden is set up as an **extension of the classroom**.

At the same time, recurrent structural barriers to consolidation have been identified, including lack of recognition and teaching time, limited funding, limited specific teacher training and the fragility of projects when they rely solely on individual involvement.

The project has identified a series of **best practices** and lessons learned that are key to the promotion of these initiatives.

The **integral approach to school agroecology**, which connects the garden with food culture, the school canteen, the territory and agri-food systems, broadening its educational potential. The importance of **regional programmes and networks**, and the **value of spaces for gathering and collective action**.

In addition to the **need to move towards stable frameworks**, both in terms of funding and institutional recognition, to overcome dependence on individual initiatives and ensure the sustainability of projects. Another learning is to understand the **potential of articulation between diverse actors** (educational centres, social entities, public administrations and networks), as a basis for the construction of collaborative processes and public policy advocacy.

## Horizon 2030

Looking ahead to 2030, Enredándonos is working together with other entities to promote a statewide network of school agroecology and food culture. The objective is to consolidate a stable space for coordination, exchange and advocacy that strengthens existing initiatives and favours their integration into public policies. With this in mind, the aim is to establish a consolidated, active national network capable of coordinating activities across the whole country.

# Dual Training for the 2030 Agenda

ASOCIACIÓN NORTE JOVEN

Madrid

Image courtesy of Asociación Norte Joven

The *Dual Training for the 2030 Agenda* project was launched to **improve the employability of young people who are socially vulnerable and have few qualifications**, using a dual approach. On the one hand, it provides training through comprehensive, personalised pathways; on the other, it integrates young people into the labour market through a work-based training contract, enabling them to advance their professional development.

The idea stems from the worrying figures of youth unemployment in our country and in our region, as well as the high levels of educational dropout, all of which is a reality widely known by Norte Joven as a reference entity in working with vulnerable young people in the Community of Madrid. Our organisation identified that there was an increasingly competitive labour environment in which the level of qualification was becoming a key element for social and labour integration and access to opportunities.

Seeking to develop responses in line with the 2030 Agenda and the Sustainable Development Goals, Norte Joven proposed the launch of a **training model with great potential for employability**, with a focus on **decent, skilled work**, through innovative, high-quality training in the fields of maintenance and energy efficiency, thereby improving young people's employability and helping to expand their skills and access to jobs in the construction and energy installations sectors.

The project, carried out in Madrid, was articulated in two phases that worked with the beneficiaries in two areas: **training and employment**.

During the first phase, young people were enrolled in comprehensive training programmes designed to equip them with the knowledge and skills required for employment and greater social integration. These pathways included vocational training in the plumbing, electrical or carpentry trades, as well as academic training to obtain the ESO diploma, and training in basic personal and pre-vocational skills.

As part of the practical training in the carpentry, electricity and plumbing trades, the students carried out Service Learning activities (ApS) through energy audits in the homes of disadvantaged families in the vicinity of the Fuencarral centre, selected and referred by Caritas.

In the second phase, the young people were given access to employment, recovering the figure of the apprentice in the company, joining a job in the framework of a **Dual Training Programme**, with the support and personalised monitoring of a Job Coach. The activities carried out during this second phase were: a) **Selection** of participants. b) Design of a personalised **training programme** for each participant. c) Psychosocial support and guidance. d) **Educational support**: During the training sessions, the employment coach was present at Agremia (an organisation specialising in air-conditioning training) to regularly assist and support the participants. e) **Coordination** between partner companies and training centres regarding the monitoring of the young people. f) Follow-up of apprentices and incorporation in the Norte Joven Labour Exchange: The Job Coach, once the DUAL training was finished and during the following 12 months, monitored the 20 apprentices, in order to know and support their integration process in the company. g) Coordination, control, monitoring and evaluation activities.

## Lessons Learned and Best Practices

The project achieved excellent results that gave a boost to the training development and the possibilities of socio-occupational integration of young people in vulnerable situations.

The implementation of the project allowed Norte Joven to extract good practices in terms of contributing to the Prioritised Challenges and Problems in the 2030 Sustainable Development Strategy, specifically to Country Challenge 2, by working in the area of improving employability.

At a methodological level, the project contributed to **consolidating the model of personalised attention** that characterises Norte Joven, especially through the figure of the Job Coach in the framework of DUAL Training, providing support and accompaniment both to the participants in their training and employment process, and to the companies that choose to link up with this type of contract to meet their demand for qualified professionals.

## Horizon 2030

Norte Joven maintains, with the 2030 horizon, a consistent course towards improving employability and reducing social inequality among young people in vulnerable situations and with low qualifications. To this end, we will continue to focus on **quality training in sectors with high demand**, individualised support and the promotion of key competences and skills for socio-occupational inclusion.

**nortejoven.org**

LinkedIn: Norte Joven

Instagram: @anortejoven

# Fair Trade Local 2030

## Promoting networks for a fair, green and sustainable economic and consumption model

**COORDINADORA ESTATAL DE COMERCIO JUSTO**

Nationwide

The project stems from the need to move towards **economic and consumption models that are more sustainable and equitable, in line with the principles of Fair Trade and the 2030 Agenda, and that are recognisable and credible to consumers.**

Traditionally, Fair Trade (FT) has been associated with North-South trade relations, but in recent years debates have emerged from international and European FT organisations on the need to advance in the development of models that apply FT criteria and principles to local contexts in the global North. We are therefore launching this project with the aim of exploring the potential of Local Fair Trade in Spain and co-developing it, creating opportunities for reflection, dialogue and learning.

The project was structured around a number of **initiatives aimed at generating knowledge, strengthening partnerships and promoting dialogue among stakeholders.** The following measures were therefore implemented:

- A process was carried out **to identify and map relevant stakeholders linked to Fair Trade, the social economy, the agri-food sector and public authorities.**
- A **Local Fair Trade Commission was set up within the State Fair Trade Coordination Committee**, comprising seven organisations from the Fair Trade movement in Spain, which worked together on the development of the project.
- **Exchanges of European experiences regarding Fair Trade** adapted to local contexts took place; to this end, two webinars were organised with organisations from France, Italy and Germany, countries where initiatives linked to the development of Local Fair Trade are already in place.

- Six **multi-stakeholder dialogue sessions** were organised in various cities across the country.
- A research report was produced on the carbon footprint of Fair Trade, entitled '*Analysis of the carbon footprint of Fair Trade coffee, cocoa and sugar compared with conventional production*'.
- An awareness campaign on responsible consumption was also launched.

## Lessons Learned and Best Practices

The project has identified key lessons for the development of the Local Fair Trade model in Spain, in line with the aim of promoting a fairer and more sustainable economic and consumption model that contributes to the 2030 Agenda. Through exchanges of European experiences and multi-stakeholder roundtable discussions, reflections and contributions have been gathered from social organisations, social economy entities, producers, public authorities and other stakeholders in the agri-food sector.

The main **learnings** obtained include the following:

- Building a **credible standards model** for Local Fair Trade requires multi-stakeholder partnerships.
- The models of Local Fairtrade Standards **must be adapted** to the realities of each country.
- **Transparency within value chains, and an understanding and application of actual production costs, are key factors.**
- **Communication and raising awareness** are key to promoting the model.
- **Environmentally friendly production techniques help to reduce pollutant emissions by between 45% and 91%** compared with their conventional counterparts. **Transport influences the total calculation but is not a decisive factor.**
- Our consumption decisions have an impact on the environment and **Fair Trade is a tool that makes it easier for citizens to be transparent in their consumption actions and their commitment to climate change and other global challenges.**

Key **best practices** from the project include the use of multi-stakeholder **roundtables** as a forum for sharing experiences and **developing collective proposals**, as well as the **combination of research, awareness-raising and networking**. These initiatives have helped to **strengthen partnerships** between organisations and lay the groundwork for the further development of initiatives related to Local Fair Trade in Spain.

Furthermore, the project has employed a participatory methodology based on Design Thinking, which has enabled the identification of needs, the gathering of input from the various stakeholders involved, and progress in the co-development of potential solutions tailored to the Spanish context. This approach has facilitated dialogue between Fair Trade organisations, social economy entities, producers, public administrations and other stakeholders, integrating different perspectives and experiences and strengthening collaboration between entities working for fairer and more sustainable economic and consumption models.

## Horizon 2030

It will continue to promote **economic models that favour biodiversity and are sustainable; and that also ensure human rights, improve working conditions and promote living wages**. Promoting production and marketing initiatives based on an accredited Local Fair Trade model built on and fed back into multi-stakeholder dialogue and partnerships. At the same time, responsible consumption options provided by the model will be promoted, communicating how they impact on the goals of the 2030 Agenda.

# Slow Fashion Alpujarra 2030

DIPUTACIÓN PROVINCIAL DE GRANADA

Province of Granada

Image provided by the Diputación Provincial de Granada

The **Slow Fashion project: Alpujarra 2030** is an initiative launched by the Provincial Council of Granada as part of the 2030 Agenda, with the aim of creating new employment opportunities and revitalising the local economy in the Alpujarra region of Granada through the modernisation of the textile and craft sector.

The idea stems from the recognition of traditional textile craftsmanship as a sector with a long-standing tradition in the region, one that offered significant potential for growth if it could be aligned with new trends in responsible consumption linked to the **slow fashion** movement. This approach promotes ethical and sustainable fashion based on quality, local production and respect for the environment.

The project was conceived as a participatory process involving craftswomen, designers, public institutions, local associations and members of the public, with the aim of revitalising the rural economy and promoting female entrepreneurship. The initiative drew on open innovation methodologies, particularly **Living Lab and Design Thinking**, which facilitated co-creation among the various stakeholders in the region.

The response from the final recipients was very positive. From the early stages of the project, there was a high participation of women artisans and entrepreneurs interested in developing initiatives linked to sustainable fashion. In addition, the project generated media and social interest, reinforcing the territorial identity of the Alpujarra as a creative and innovative space within the ethical fashion sector.

The project was developed in different municipalities of the Alpujarra of Granada and was structured in several complementary lines of action: Through the **Alpujarreña 4.0 School** (Torvizcón and Bubián) a training programme was launched to promote entrepreneurship in the textile crafts and sustainable fashion sector.

The creation of an **Entrepreneurship Incubator** that enabled a digital platform for business support that provided advice to **29 craftswomen**, providing them with tools for the development of their projects and facilitating access to training content and resources for entrepreneurship.

In addition, the brand “Alpujarra Slow Fashion” was created as a collective brand to identify textile products made under criteria of sustainability, local production and respect for traditional craft techniques. These initiatives were complemented by **market research**, a **marketing plan** and a **promotional website featuring an online marketplace** for product sales.

To drive progress and innovation, the project was supported by the creation of the **Slow Fashion Alpujarra 2030 LAB (Living Lab)**, a collaborative innovation hub where craftswomen, designers and experts worked together to develop sustainable fashion prototypes.

As a culmination of the creative process, the **Alpujarra Slow Fashion Catwalk**, held in Granada as part of the European Crafts Days 2025, was organised. The pilot collections developed in the Living Lab, combining traditional craftsmanship and contemporary design, were presented.

## Lessons Learned and Best Practices

One of the key lessons learned from the project is the capacity of **rural areas** to generate **economic and cultural innovation** based on their traditional resources. The combination of craftsmanship, contemporary design and sustainability has positioned the Alpujarra as a territory with creative potential within the sustainable fashion sector.

The following aspects should also be highlighted:

- The **empowerment of women artisans** through training and entrepreneurship support.
- The **reevaluation of traditional textile techniques**.
- The creation of **collaborative networks between craftswomen, designers and institutions**.
- The generation of a **territorial identity associated with ethical and sustainable fashion**.

Notable examples of established **best practices** include the use of **participatory methodologies** such as Living Labs, the integration of training and entrepreneurship into rural development projects, and the creation of regional brands that link cultural identity with economic innovation.

## Horizon 2030

Looking ahead to 2030, the Provincial Council of Granada aims to consolidate the ecosystem built around **Alpujarra Slow Fashion**, strengthening its production, commercial and training structures. Between 2026 and 2030, a **Territorial Innovation Centre (CIT)** will be launched in Bubión, in partnership with the Ministry for Ecological Transition and the Demographic Challenge and funded by the ERDF. This centre will give continuity to the lines initiated by the project, such as the marketplace, the network of craftswomen and designers, the sustainable fashion catwalk and new marketing spaces, with the aim of consolidating sustainable fashion as an engine of development for the Alpujarra.

# Resilvestra

## Citizen science to explore climate resilient foods

INICIATIVAS SOCIOAMBIENTALES G.S. COOP. MAD

Madrid

Image courtesy of Iniciativas Socioambientales G.S Coop. Mad

Since the green revolution, industrial agriculture has been spreading across the world landscape, and today occupies 70-80% of the world's cultivated land area. This form of agriculture, characterised by monocultures of just a few species and the use of hybrid or genetically modified seeds, results in a high degree of ecological homogeneity, making it particularly vulnerable to the effects of climate change and posing a threat to food security. Hybrid varieties are genetically very homogeneous, which makes them **more vulnerable to adverse weather conditions, pests or diseases**. Restoring genetic diversity is a key strategy to improve the sustainability of agriculture and enhance food security.

From this perspective, **Resilvestra** was born, a **citizen science** project whose objective is to **research edible wild plants as new crops and innovative foods**, evaluating their potential to diversify agroecosystems and increase resilience in the face of climate change.

Through **participatory research and citizen science**, the project seeks to improve knowledge about the current management and use of these species, focusing on their agronomic characterisation, sensory evaluation, research into culinary techniques and analysis of consumer preferences.

Throughout the project, **diverse activities** have been developed in which participatory scientific studies have been implemented through agronomic field trials, culinary research and sensory tastings, research into culinary innovation and actions to disseminate, transfer and raise awareness of the importance of these species as part of the diet and agricultural production.

Agronomic trials are field studies that provide information on the agronomic characteristics of different crops. To this end, the scientific community as well as vocational training centres, agro-ecological projects and research centres carried out **tests** that have provided information on the productivity and cultivation cycle of nine wild edible plants.

The **sensory and hedonic tastings** are scientific measurement techniques to determine and evaluate the organoleptic characteristics of a food, as well as to know its acceptability for consumption. Sensory tastings have been carried out with all stakeholder groups, especially vocational students, scientific citizens and participants of dissemination and transfer events.

On the other hand, **gastronomic innovation trials** have been carried out involving both IMIDRA's gastronomic research centre staff and vocational training cookery schools.

Finally, **Resilvestra** has implemented various dissemination and transfer actions on the knowledge and use of wild edible plants, such as routes of recognition, collection and tasting of wild edible species in the agro-ecological farms participating in the project, among others.

The project's findings were presented at the National Botany Congress in Seville, at the citizen science event organised by the European Science Us project in Berlin, at the *Royal Botanical Gardens' Science Marathon*, and at the *20th Gastronomic Conference on Forgotten Plants* (Igualada).

## Lessons Learned and Best Practices

The key findings from the project have led to a **better understanding of crop productivity, crop management, sensory profiles, consumer acceptance and culinary techniques**.

The agronomic data collected showed promising results regarding the potential of these species as climate resilient crops. It is noted that some species can achieve productivity rates similar to those of existing comparable crops and, at the same time, are better adapted to adverse climatic conditions such as high temperatures or early frosts, whilst others are of interest as low-input crops that could be harvested as winter vegetables.

On the other hand, the sensory profiles of these species, which had not yet been studied, have been obtained and the degree of acceptability for consumption has been evaluated.

Finally, approaching agroecological research through citizen science makes it possible to achieve the objectives of raising public awareness and engagement, whilst ensuring high-quality and robust results.

## Horizon 2030

At the Germinando cooperative, we will continue to work on improving the resilience of agricultural ecosystems to ensure food security and sustainability in the food system, through research and innovation projects, using citizen science and participatory processes, which enable people to play a key role in achieving this goal.

# Improving awareness of the environmental impact of clothing consumption

**MODA RE S. COOP DE INICIATIVA SOCIAL**

Nationwide

Image courtesy of Moda Re.

The **Improving awareness of the environmental impact of clothing consumption** project aims to promote responsible consumption and the circular economy, in line with the SDGs. Faced with the need to reinforce environmental education, the cooperative **Moda re-** designed a **nationwide programme** aimed at educational centres, universities, public and private entities and the general public.

Using a pedagogical and transformative approach, the initiative integrated face-to-face workshops, innovative audiovisual resources, communication campaigns and pilot testing in rural areas. All these actions focused on transforming textile waste into a key resource for sustainable development and social justice.

With a remarkable national reach, the project enabled students, teachers and technical staff to significantly improve their knowledge of waste management. In total, awareness was raised directly among more than **15,500 people** and reached **35,000 digital users**, establishing reuse as a cornerstone of conscious consumption.

During the 12 months of implementation, actions of local and national impact have been deployed, including the following:

**Awareness-raising days** in schools and universities: In the educational field, **more than 200 workshops** have been held in schools (Primary, Secondary, Baccalaureate) and **30 information points** in Vocational Training and Universities, integrating innovative methodologies such as the dynamics of *re-atro* - a theatrical proposal specifically designed to raise environmental awareness.

**Training for instructors and technicians:** To ensure that the knowledge gained has a multiplier effect, more than **25 technical training sessions and train-the-trainer courses** have been held. These interventions have made it possible to specialise teachers and professionals in the environmental sector in several key regions, notably the Valencian Community, where 125 educators and technicians were trained, as well as the Community of Madrid, Catalonia and the Basque Country.

**Activities in public and private entities:** Deployment of an intense agenda of territorial intervention through the execution of more than 145 awareness-raising talks and workshops in a wide range of spaces, including public bodies, municipal centres, private entities and community associations.

**Pilot Project Moda re- en Ruta:** One of the most innovative initiatives of the project has been the launch of the pilot test **Moda re- en ruta** in Extremadura, an **eco-social vehicle designed to raise awareness, sell and donate textiles** that has travelled around various rural environments. With a launch event attended by the communicator Raquel Sánchez Silva, this mobile unit made **106 stops in 9 municipalities** in the province of Cáceres. In addition to participating in **strategic fairs in Cáceres and Badajoz**.

**Technical and citizen outreach events:** Regarding the institutional and technical dimension of the project, high impact events have been organised such as ***Circular II: Encounters on circular and sustainable fashion***, held at the Museo del Traje in Madrid, which brought together **450 attendees** in person and generated more than **20,000 impacts on professional networks** such as LinkedIn.

**Development of audiovisual and digital materials:** Milestones achieved include the creation of a **new awareness-raising web platform** and the production of **two main audiovisual pieces**, complemented by a series of **tutorial videos on creative recycling**, focusing on macramé and visual merchandising techniques - for both internal training and the general public.

## Lessons Learned and Best Practices

The implementation of the project has validated the **hybrid model** as a successful strategy for environmental education, achieving over 18.5 million digital impacts and high face-to-face engagement through **pedagogical innovation** (such as the *re-atro*) and intergenerational materials that simplify the circular economy. The initiative **"Moda re- en ruta"** confirmed the need to bring **sustainability closer to rural areas**, overcoming geographical barriers to promote responsible consumption.

For society, the key lesson has been the **reevaluation of second-hand clothing**, which has gone from being waste to a valuable resource and an ethical purchasing option. In addition, teacher training has created a **multiplier effect** essential for spreading sustainable habits. In conclusion, the project demonstrates that achieving **"zero landfill"** requires combining operational transparency and social awareness, positioning the social economy as a driver of a just ecological transition.

## Horizon 2030

**Moda re-** is projected as a national benchmark in textile awareness, promoting alliances and education to increase its impact and achieve the goal of "zero textile waste". This project addresses the Country Challenges of the 2030 Agenda by mitigating the climate emergency (2) and transforming the economic model (4). It also integrates sustainability with inclusive employment and human rights, reinforcing Challenges 5 and 7.

# CHALLENGE 3

**SUSTAINABLE TERRITORIAL  
STRUCTURING TO IMPROVE  
SOCIAL COHESION  
AND ADDRESS CLIMATE  
EMERGENCY**

# Sustainability of life as a municipal beacon

**ARADIA, ESPACIO PARA LA PROFUNDIZACIÓN DEMOCRÁTICA, S.COOP.**

Araba (Amurrio), Barcelona (Terrassa), Asturias (Mieres, Eastern Asturias).  
And then at the international level (Municipality B of Montevideo)

Image courtesy of Aradia

This project is based on the question: **What can local institutions do to promote the well-being of the territories and the people who live there?** How can we build caring municipalities that ensure liveable lives? We began to explore the answers to these questions in previous projects, particularly through our support for Amurrio Town Council (Araba) in defining and putting into practice a care-based approach in its municipal work.

This work formed the basis of *SOSVIDA*, as it enabled us to compare different aspects and criteria across other local contexts. We use the methodological tools provided by **Participatory Action Research to promote the collective development of strategies and proposals for implementing the 2030 Agenda** from a perspective of sustainability of life.

This participatory action-research project with a feminist perspective has been carried out through different activities, among which we highlight the following:

As part of the documentary work, we **compiled a bibliography**, carried out research, and produced reports, guides and other materials that enabled us to establish an interpretative framework and identify relevant experiences and best practices.

Furthermore, this involved **creating, developing and revitalising the participatory structure**. Work was carried out with two municipal driving groups and two driving groups with experts, in addition to an online discussion and **in-depth interviews** to enrich the reflections with other local realities.

In addition, different face-to-face and online sessions were held with different working groups:

- **Three face-to-face sessions** with political and technical staff at Terrassa Town Council who contribute their knowledge from projects such as Igualdades Conectadas.
- **Three online sessions with political, technical and social staff from Municipality B of Montevideo** from which to learn from a virtuous experience such as their care plan.
- **Three online sessions in the two groups of experts**, from the world of academia, technical support and the social fabric from different territories such as Andalusia, Castilla y León, Catalonia, Euskadi, Extremadura, Galicia and Madrid.

To expand on and cross-check the information, in-depth interviews were conducted with nine politicians or technical staff from local councils who demonstrated an interest and commitment (Mieres, Llavaneres, Oñati), and we took part in group discussions. Furthermore, at the request of participating local councils wishing to form a network, we organised a discussion between Amurrio Council (the catalyst for this project), Terrassa and Municipio B on public policy and the care perspective.

Finally, the results were systematised, collated and analysed in order to shape the materials (design and writing). This is embodied in the guidebook ***Sustainable Living as a Municipal Beacon***, the collective book ***Entangling for Liveable Lives. Reflections and proposals for moving towards habitable territories*** and the website [www.municipioscuidadores.org](http://www.municipioscuidadores.org).

## Lessons Learned and Best Practices

This project has involved a significant process of **collective reflection and the sharing of experiences**. Based on all this, we have developed a proposal outlining what it means to move towards '**caring**' **local authorities**, an approach we have framed around a journey along five paths: the Path of **Plurality**, the Path of **Deep-rootedness**, the Path of **Cooperation**, and the Path of **Tenderness**. Finally, there is the Path of **Non-Profit**, so that public policies linked to the care of nature and people prioritise well-being over the economic profits of private companies.

These dimensions, which we propose in a cross-cutting manner, allow us to construct a roadmap from which to build strategies to gradually transform the public policy process through the application of a series of criteria. These strategies are not applied in the abstract, but we have to address them in four territories that we have defined as rural, urban, natural and digital, so that we do not forget that the actions we take depend on, impact, if not directly impact, other spaces and peoples, especially those in the global south.

## Horizon 2030

Our work aims to further explore the sustainability of life at the municipal level, promoting frameworks for the design and evaluation of public policies that recognise diversity, promote **rootedness and local cultures**, foster cooperation between actors, ensure violence-free lives, and prioritise wellbeing and care over capital.

# SiembraBosques

ASOCIACIÓN SEMILLISTAS

Granada

Image courtesy of Asociación Semillistas

**SiembraBosques** is part of the initiatives promoted by Semillistas in the region of La Alpujarra in Granada. The aim of the project was, and continues to be, to promote the **eco-social restoration** of the Mediterranean forest through direct sowing of forest seeds.

This methodology seeks to complement or replace traditional reforestation models based exclusively on planting seedlings, integrating scientific and biotechnological knowledge and local ecological knowledge to favour **the natural regeneration of ecosystems** with lower costs and maintenance.

The project arose after the first sowing campaigns in 2020, which showed the potential of direct sowing as an effective and participatory tool for restoring degraded ecosystems. Building on these pilot projects, a comprehensive initiative was designed to regenerate the Mediterranean forest in degraded areas; this included the establishment of a **seed biotechnology laboratory**, the development of open-source research tools, **volunteering and local collaboration**, and the creation of **high-quality green jobs** in rural communities with a focus on equality.

This project has, throughout its various phases, focused its efforts on **climate change adaptation through the reforestation of Mediterranean woodland**, the promotion of the population's physical and mental wellbeing, community development and cohesion, sustainable rural development, knowledge creation, and the development of an open-source model of action (R&D&I) that can be replicated in other (rural) areas of the world.

Among the various activities carried out by the organisation, **reforestation** actions have been carried out with local and European volunteers and contracted personnel through seed sowing days. In addition, harvesting and seed preparation with volunteers.

Other activities included the implementation of **health care practices and body care therapy sessions** for volunteers. In addition, non-formal education activities on innovative reforestation methods, job creation for the local population and awareness-raising and dissemination actions through talks, workshops and volunteer days. Particular mention should be made of the creation and publication of the **Manual of Best Practices for Quercus Restoration Projects in Mediterranean Environments**.

## Lessons Learned and Best Practices

This project has enabled the organisation to consolidate its knowledge and know-how in the field of applied research. The project has made it possible to develop and test different biotechnological treatments for forest seeds, generating knowledge on the germination and establishment of native species in Mediterranean climate conditions.

One of the most relevant results has been the **strengthening of the community fabric** around the restoration of the territory. Participation in planting days, workshops and meetings has generated spaces for collective learning, exchange of knowledge and environmental awareness.

The project has consolidated several **practices** that are now integrated into the organisation's day-to-day operations:

- **Direct sowing methodology adapted to the Mediterranean ecosystem**, combining scientific research and dissemination of results.
- **Community participation model**, where volunteers, professionals and local people collaborate in restoration actions.
- **Development of open-source technology** applied to seed biotechnology, facilitating the replicability of the model.
- **Integration of health care and community well-being** as part of environmental restoration processes.

## Horizon 2030

The aim is to consolidate a replicable model of eco-social restoration aligned with the Sustainable Development Goals. The organisation plans to strengthen its structure more horizontally, diversify funding sources and expand its research capabilities. It will also promote education and citizen science programmes. The aim is to expand the methodology to other territories through collaborative networks, **promoting the regeneration of more resilient ecosystems and communities**.

# Alcantarilla Pedalea+

## New cycling routes to promote bicycle transport

**AYUNTAMIENTO DE ALCANTARILLA**

Alcantarilla (Murcia)

Image courtesy of Ayuntamiento de Alcantarilla

The project *Alcantarilla Pedalea+*, *new cycling routes to promote bicycle transport*, aims to increase the use of bicycles for local residents' journeys. This initiative stems from Alcantarilla Town Council's priority policy to promote sustainable mobility, as set out in its Urban Agenda, a strategic document outlining the municipality's contribution to achieving the SDGs.

The project consisted of the drafting and design of the implementation projects for 6 routes of the network established by the Sustainable Urban Mobility Plan (PMUS). As well as a pilot scheme consisting of:

- **3 secure bike racks** along the cycle routes with a total of 22 spaces. In addition, access to the car parks is free if you download the Verde app (Android/iOS).
- **The information boards** have been designed and installed, including the cycling routes.
- **Four informational signs** have been produced recommending the best cycling routes in the municipality.

In addition, the project has been supported with citizen participation actions and awareness-raising and communication activities.

## Lessons Learned and Best Practices

1. Projects of this kind have helped us to **improve** both our **technical planning** and the **digital and social culture** of the municipality. The combination of traditional channels (leaflets and the press) with digital tools (social media and the website) has set a **standard for public communication** that keeps the public informed about the project's progress in real time.
2. The **citizen participation** is being essential as a driver of change in sustainable mobility and social model changes. There was a high level of participation in the public call for proposals (383 participants in the itinerary survey and 144 in the bike rack location survey). In addition, this initiative has helped to improve **perception and participation** in the democratic sphere.
3. The **training and workshops** is a fundamental pillar for the promotion of this type of action. The integration of specific workshops for schools and for municipal staff themselves ensures that the Urban Agenda strategy is not just a document, but a culture shared by public workers and future generations.
4. The implementation of the Green APP via QR codes has modernised access to the service, facilitating an autonomous and free user experience.
5. The **bicycle** functions as a tool for **social inclusion**.
6. **Data Driven Design**: The practice of making the location of infrastructure (such as bike racks) dependent on the results of citizen consultations has been established as a successful methodology for reducing planning errors.
7. **Effective co-governance**: The Mobility Board has established itself as a permanent space for dialogue between the Town Council, organisations and neighbourhood associations, allowing decision-making to be shared and transparent.

Alcantarilla Town Council was recognised at the **3rd edition of the 2025 Murcia Region Mobility Awards**, organised by UCAM, for its "*Alcantarilla Pedalea +*" project in the category for councils with fewer than 50,000 inhabitants. The aim of these awards is to encourage and publicise new developments in the planning and management of sustainable transport in the Region of Murcia.

## Horizon 2030

The Alcantarilla Town Council will continue to focus its strategy on transforming urban mobility by promoting bicycle transport. The work focuses on implementing a cycling network structured in six phases and implementing safe infrastructure to facilitate daily commuting. Through co-governance and citizen awareness, the project continues to seek to consolidate a healthier, more efficient and climate-neutral municipality model by the end of the decade.

# Rural Housing

## Pilot projects for release and rehabilitation

**COCEDER**

Nationwide

Image courtesy of COCEDER

The project arises from the structural problem of the lack of available housing in rural areas, identified as one of the main obstacles to population settlement and territorial development. COCEDER and its network of rural development centres have detected the existence of a significant stock of underused or empty housing, together with administrative, social and cultural difficulties that prevent their mobilisation.

The trend of abandonment of rural areas generates other problems (ageing of the population, closure of small businesses, abandonment of land, reduction of services) that aggravate the situation. To reverse this trend, **rural areas must be made liveable**; the population needs access to work and, above all, to housing, as well as to basic services that are gradually disappearing due to depopulation.

The lack of available housing for primary residence (habitual use) is a reality in rural Spain, with the paradox that there is empty housing, but not available, for different reasons (poor condition, second homes, inheritance conflicts, tourist pressure, mistrust, family reasons).

This project has worked on the creation of a network of **Rural Housing Offices** through different pilot projects to generate physical and virtual spaces of reference for meetings, advice, study and research on housing in rural areas, with the aim of coordinating the different community agents (public administrations, citizen participation platforms, the general population and third sector entities) and among themselves, to promote participatory actions at different levels (local, county, regional, etc.) that can be scaled to "guarantee access to housing".

The aim has been to work towards creating a **suitable environment for the professional and personal development of the rural population**; to this end, we believe it is necessary to address the lack of services caused by a shortage of: professionals in rural areas (particularly in the fields of renovation, accessibility and home adaptation), a new generation of workers, training programmes tailored to local needs, and entrepreneurship in rural areas, amongst other issues.

The project's activities have included **comprehensive social and labour market integration programmes**; the establishment of 22 permanent housing offices and two mobile offices across the region, serving as spaces for meetings, advice and support; the provision of **information and advice** to property owners; training for the project's own technical staff; and awareness-raising events aimed at influencing society and politics. In addition, a study on housing in rural areas.

## Lessons Learned and Best Practices

Among the lessons learnt and best practices identified through this project, we can highlight:

- The positioning of our organisation in rural areas, making us a national and local reference point for housing in rural areas, we have drawn up a manifesto for decent housing in rural areas, good practices in rural housing, specific training for professionals.
- The use of alternative housing options (co-living, leasehold arrangements, etc.)
- Such projects generate synergies, the results of which are visible in the long term. By building trust with local people and demonstrating tangible results, we are gradually encouraging property owners with available housing in these areas to get involved and provide access to housing. It has established a network of collaboration with local authorities and stakeholders.
- The integration of applied research into regional development initiatives. The development of methodologies accessible to non-specialist staff.
- Rural Housing Offices have established themselves as a useful and valued resource for the population and administrations.

## Horizon 2030

COCEDER orients its work towards the consolidation of a stable model of rural housing intervention that guarantees access to decent housing as a key condition for sustainable territorial development. Looking ahead to 2030, the aim is to strengthen the network of Rural Housing Offices, increase the mobilisation of vacant properties, improve institutional coordination and promote more effective public policies, thereby contributing directly to the fight against depopulation and the achievement of the Sustainable Development Goals.

# RegenerAcción

## Tools to turn climate emergency into opportunity

FUNDACIÓN HOPE ACCIÓN CLIMÁTICA

Nationwide

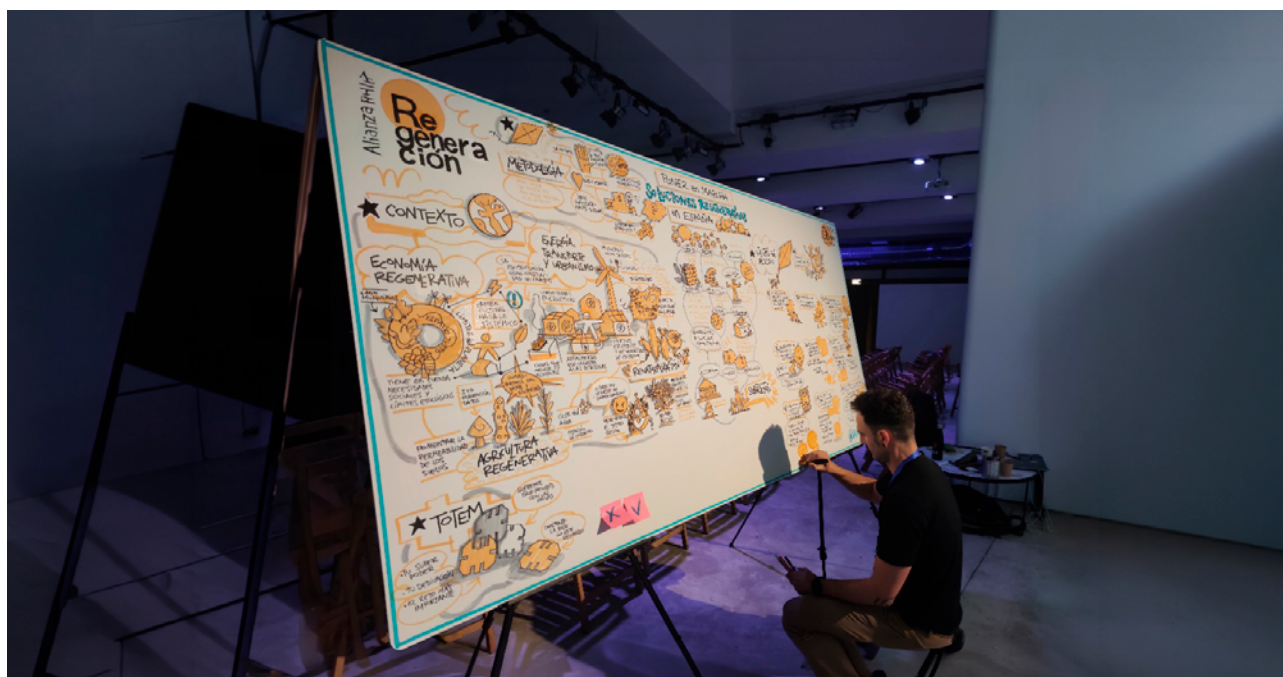

Image courtesy of Fundación Hope Climática

**RegenerAcción** was born out of the conviction that **the climate emergency** is not only a threat, but also an opportunity for social and ecological transformation. The *Hope Acción Climática* Foundation, with a track record in positive climate communication through its documentary series *Hope! estamos a tiempo*. It detected the need to accompany this citizen impulse with concrete tools: hopeful narratives, replicable solutions, meeting spaces and local action networks.

The project has shown that there is **a real demand for positive, participatory and action-oriented climate communication**. This work has been carried out through the following **activities**:

The development and dissemination of **informational videos** on the **SDGs** and Agenda 2030 on social networks. These videos addressed the following contents: Educational videos on SDGs (affordable energy, industry and innovation, climate action, terrestrial ecosystems and topic-based success stories). Videos on **regenerative success stories** (compost, energy, renaturalisation, the circular economy, regenerative agriculture). In addition, a **Bimonthly newsletter** on SDGs and Agenda 2030 has been created with great success in terms of subscribers.

In parallel, a **mapping of solutions** and **local action groups** has been carried out through the digital platform [oleadaporlaregeneracion.es](https://oleadaporlaregeneracion.es). This platform has provided 50 success stories solutions from the different groups. Thanks to this work, new sections have been added to the platform, such as the maps section, which includes more than 20 resources across six themed categories. The conceptual evolution of this platform from a static repository to a **regenerative action-oriented space** is noteworthy.

Another action has been the creation of positive narratives. To this end, various resources have been produced, including: a **Handbook of Narratives for Regeneration**; a video summary of the handbook in visual thinking format; an online seminar entitled *The Regenerative Wave: A New Climate Narrative to Secure the Future*; a digital competition and exhibition, *Arts for Regeneration*; and a video entitled *The Power of Hope: Lessons from Corals to Create a Regenerative Wave*.

The dynamisation of social participation has been another key point. Regeneration content has been disseminated through WhatsApp groups, local action groups, video forums, the community website and various online meetings.

Finally, the **Regeneration Alliance Days** were held with more than 100 participants selected for their position and influence on ecosocial regeneration. They established a **dialogue** through expert roundtables and the realisation of an innovation lab. Supported by a facilitative technical deployment.

## Lessons Learned and Best Practices

The **RegenerAcción** project has developed and established how **positive climate communication** based on success stories generates greater engagement and sense of agency than risk-focused approaches. In addition, the **combination** of audiovisual content on networks with digital participation tools (maps, group platforms, educational resources) multiplies the reach and depth of impact. Likewise, local action groups, when provided with resources and support, tend to develop organically and autonomously, fostering sustainable forms of community collaboration.

Finally, the articulation between **communication** (narratives, videos, newsletter) and **in-person engagement** (conferences, video forums, laboratories) allows for the creation of an **ecosystem of impact** that is more robust than either of the two channels separately.

## Horizon 2030

The Hope Acción Climática Foundation focuses its work on the consolidation of a **citizen movement for eco-social regeneration** in Spain and Latin America, with [oleadaporlaregeneracion.es](https://oleadaporlaregeneracion.es) as a reference platform. The aim is for the local action groups, educational resources and solutions map to grow autonomously and sustainably, reaching out to all citizens who want to move from concern to action.

In 2026, the strategy takes a decisive step forward by adding a third pillar: **innovation in the field**. Through pilot projects, the *Hope Foundation* will explore the limits of **regeneration** of soil life and biodiversity in productive and natural landscapes, while generating expert groups and campaigns that, together with the results of these projects, will serve as a guiding light for local action groups.

The long-term vision is that, by 2030, the Regeneration Wave—with its three integrated pillars: online outreach through Hope!, pilot projects across the region, and social engagement involving citizens and experts—will have established itself as a **social movement** with a genuine capacity to influence public policy.

# A Just Economy at the service of the Sustainable Development Strategy for a transformative Agenda 2030

## ECONOMISTS WITHOUT BORDERS FOUNDATION

Aragon, Canary Islands, Cantabria, Madrid, Valencia and Basque Country

Image courtesy of the Economists without Borders Foundation.

The initiative stems from the experience accumulated by the organisation in the field of education for global citizenship, the **promotion of the social and solidarity economy and ethical finance and investment through critical reflection** on the dominant economic models.

The proposal responds to the need detected by the organisation and its collaboration network (made up of teachers, students, social and solidarity economy organisations and social agents) to promote a **critical understanding of the 2030 Agenda** and the transformations needed to move towards fairer, more sustainable and democratic economic models.

To this end, a series of training, awareness-raising, applied research and support activities for social and solidarity economy initiatives are promoted. These actions are aimed at both the formal educational sphere (universities, vocational training centres and institutes) and the entrepreneurial ecosystem of the social and solidarity economy and the general public interested in ethical finance and responsible investment, feminist economy and sustainability.

The project is structured along three main axes:

- **Training and awareness-raising on critical economy and Agenda 2030**, aimed primarily at students, teachers and the educational community. The conference “Another economy is on the move” was held in Madrid, focusing on dialogues on degrowth and community knowledge. In the academic sphere, Summer Schools were held in Madrid and summer courses on critical economics at the UPV/EHU (Bilbao). The online course *Towards an economy at the service of people* was also given in collaboration with the UNED of Tudela. To raise awareness among students, the exhibition *Women rethinking the economy* was taken to various university faculties (Bilbao, Donostia, Alcalá de Henares) and an interactive game on social justice was designed in collaboration with the Ikastola Harrobia (Bilbao).
- **Strengthening entrepreneurship in the social and solidarity economy**, through training, advice and the creation of meeting points for initiatives. This axis has promoted inter-cooperation through face-to-face networking meetings. Service-learning spaces were promoted and the **digital platform El Nido** has been created, conceived as a virtual space for inter-agent exchange and collaboration.
- **Research and dissemination in ethical finance and socially responsible investment**, with the aim of improving transparency and knowledge of the sector. The online tool **SRI Fund Lab** has been developed and updated annually and reports have been published on the state of the Socially Responsible Investment sector in Spain.

## Lessons Learned and Best Practices

The digital platform **El Nido**, created and promoted throughout the project, now has **914 active users**, consolidating itself as a reference space for the exchange of experiences and resources between agents from different groups.

From a qualitative perspective, the project has allowed **strengthening collaboration networks** between academia, the social economy network and citizens interested in alternative economic models. Training activities and forums have fostered the **exchange of knowledge, critical reflection and the development of new initiatives** and collaborations among diverse stakeholders who share common interests and a commitment to global justice.

The project has also highlighted the growing demand for educational spaces that address the challenges of the 2030 Agenda from critical, feminist and global justice perspectives. The experience has also identified the importance of combining face-to-face and digital methodologies to broaden the territorial scope of the activities and facilitate the participation of diverse audiences.

The **networking** is the key driver for multiplying the impact of the project, allowing local actions to reach a systemic and transformative dimension. Economists without Borders reinforces this strategy by actively participating in strategic spaces such as the Multi-agency Forum on Social Transition and Agenda 2030 and the Basque-Country CER. It also actively participates in the Coordinating Committee of NGOs in Spain and the Basque Country and in REAS, the Social and Solidarity Economy network. This collaboration with networks ensures the exchange of knowledge and **political advocacy**, guaranteeing that the tools of the social and solidarity economy reach a much broader social and academic fabric.

## Horizon 2030

The organisation focuses its work towards 2030 by strengthening the critical capacities of citizens, students, teachers and social agents with the aim of creating a community of learning and collaboration between different agents (educational community, community of entrepreneurs and companies) that promote sustainable, fair and solidarity-based economic, business and financial models.

# Revaluation of the rural environment through a network of companies and social entrepreneurs

FUNDACIÓN PARA EL DESARROLLO SOCIOECONÓMICO DEL ALTO ARAGÓN

Huesca

Image courtesy of Fund. Para el desarrollo socioeconómico del alto Aragón

The project focused on projects and social entrepreneurs, in the field of promoting collective projects that foster a closer approach to the 2030 Agenda.

An **initial assessment** was carried out focusing on **depopulation** and **opportunities** in rural areas, as a cross-cutting issue that affects many of the indicators of the 2030 Agenda. In addition, the census of responsible companies in the province of Huesca was updated.

The projects, consultancy and workshops have been developed along three lines of action where each of the planned activities have been carried out. Most notably:

- In the context of **depopulation** and in collaboration with the network of Chambers of Commerce, which led to the creation of the joint project 'Chambers of Commerce Network Against Depopulation'.

- Direct work was carried out with local councils due to their interest in developing collective **Energy Community** projects. A joint project involving 33 local councils in the province was successfully organised to form a provincial Energy Community; although it was not ultimately awarded funding through public calls for proposals, it did establish a public-private partnership focused on energy efficiency and sustainability.
- A **workshop on innovation and cooperation** was held, with a network of companies, institutions and technicians from the Chamber of Commerce, where the relevant issues of collective concern to companies and society, and related to the 2030 Agenda, were discussed. Working groups were set up, one of which focused specifically on social responsibility, with the participation and dynamisation of the Aragon Volunteer Platform.

The project activities have been based on the three lines of action detailed above and piloted from the municipality of Huesca, although the project contemplates the action and participation of the whole province of Huesca.

These activities have led to training activities such as **networking and corporate volunteering**, the network of Chambers against depopulation and Toda Energía Huesca on energy communities.

## Lessons Learned and Best Practices

The key lessons learnt from the project relate to:

The **collective entrepreneurship** is fundamental for the development of the rural environment and the territorial impulse of depopulated provinces such as the province of Huesca. Therefore, the creation of counselling systems that focus more on the whole than on the individual is essential. The development of the Chamber Network against Depopulation and the Provincial Energy Community projects are examples and seeds for future joint ventures.

Companies are not directly focusing on the 2030 Agenda, but common issues linked to the SDGs do arise; consequently, it is possible to develop a more **practical understanding** of the 2030 Agenda within the business community.

There is still a separation between the third sector and business. The search for **meeting spaces** generates new opportunities for collaboration.

Moreover, the applied approach of support between companies (Huesca Chamber), third sector (44 entities of the Platform) and Fundesa as facilitator can be replicated-transferred to other levels and provinces, and continued in other formats.

Lastly, the **methodology has been developed and made available in the projects promoted** (Network of Chambers against Depopulation, Provincial Energy Community, and Workshop on innovation-cooperation for the detection of difficulties and challenges for the development of the 2030 Agenda), which can be replicated in other territories and provide tools for the promotion of the 2030 Agenda in predominantly rural territories.

## Horizon 2030

Fundesa, as an entity that promotes provincial socio-economic development, is working on various lines of development:

- Update of the provincial indicators of the Agenda 2030
- Follow-up of the working groups promoted and continuity in the detection of collective difficulties (socio-business) at provincial level in the face of the challenges of the 2030 Agenda.
- Development and participation in projects that unite the third sector and companies, and in the field of corporate volunteering and the development of collective support (volunteering + companies + institutions) to attend to the difficulties of the rural environment and its population.

# CHALLENGE 4

**FREE, EQUAL AND  
COMMUNAL LIVES**

# Un botiquín para mi ciudad

## Neighbourhood laboratories for eco-social transition

GRI GRI

Valencia, Ceuta and Madrid

Image courtesy of GRI GRI

Following the **first phase of the project**, in which women from Ceuta, Vallecas (Madrid) and Orriols (Valencia) created spaces for collaborative work and cooperated in developing **neighbourhood-led solutions** to **improve** their living environments, in this second phase we continue to support these initiatives and strengthen the partnerships forged between the stakeholders and groups initially involved.

The programme proposed various ways of combining tools drawn from community culture, citizen innovation and the **social and solidarity economy**. Three principles that are activated through cultural mediation in their capacity to promote the situated implementation of the 2030 Agenda and to strengthen other narratives of the territory.

The project employed a methodology aimed at countering the eco-social crisis through the implementation of models of **collective creation**, rooted in neighbourhood initiatives, with a view to opening up possibilities for imagining alternative ways of doing things and providing local responses to the global challenges associated with sustainable development. In a democratic and participatory manner.

Furthermore, this methodology sought to promote bottom-up models of governance that would **encourage the democratisation of civil society organisations, citizen self-organisation, the strengthening of links between institutions and the community, and the co-management of resources** for the common good.

In this way, the entire collaborative process outlined in the programme involves, on the one hand, a quest to restore trust between institutions and the public and, on the other, an aspiration to forge horizontal bonds of closeness and reciprocity between diverse stakeholders.

The following activities were carried out in accordance with the methodology:

- **Preparatory sessions** in the 3 territories of the project to carry out the diagnosis of the situation, collect neighbourhood remedies (visualise their contributions to the Sustainable Development Strategy 2030), involve new collectives and set a roadmap.
- Neighbourhood **laboratories** in the project's three territories: The aim of this action was to prototype and disseminate the collected neighbourhood remedies with partner organisations.
- A series of **webinars** streamed via YouTube. The aim of these sessions was to **systematise the methodologies** used in the development of the laboratories, to highlight the **strategies of self-organisation** and collaborative work approached from the everyday life of the citizen collectives, to make the learning developed during the previous phases accessible and shareable in a practical and structured way and to generate **alliances**.
- **Evaluation** workshops and communication campaign.

## Lessons Learned and Best Practices

"Un Botiquín para mi ciudad" has consolidated a **methodology of citizen innovation** connecting aspects of community culture, cultural mediation and the social and solidarity economy, aimed at activating neighbourhood participation in the local implementation of the 2030 Agenda. Through three laboratories in Ceuta, Orriols (Valencia) and Vallecas (Madrid), it has promoted models of **collective creation** to generate local responses to eco-social challenges.

Some of the **lessons learned** include: Strengthening the community fabric and trust between stakeholders; raising the profile of local knowledge; promoting new local narratives; consolidating partnerships between social actors and institutions; and implementing participatory, inclusive and horizontal methodologies that reinforce community governance.

In addition, the following **best practices** have been identified: the establishment of context-based working methods rooted in active listening; the involvement of social partners from the early stages of the project; the need to use creative and collaborative methodologies; and the mainstreaming of equality, alongside the value contributed by interculturalism and regeneration, at both environmental and social levels. In addition to the return of the results to the participating communities.

Neighbourhood laboratories are effective tools for democratic innovation, capable of strengthening the protagonism of neighbourhood networks in the transformation of their territories and communities.

## Horizon 2030

Within the framework of **Horizon 2030**, GRIGRI continues to work for the development of research, creation and cultural production projects focused on the construction of the city through co-design and work in public space, in a collaborative, experimental and situated manner, and relying on the processes that arise from the community environment and the links generated.

# Addressing the Sustainable Development Goals through the City of Soria's Equality Plan

AYUNTAMIENTO DE SORIA

Soria

Image courtesy of Ayuntamiento de Soria

The project 'Addressing the Sustainable Development Goals through the City of Soria's Equality Plan' aims to effectively **integrate the 2030 Agenda into local public policies**, using the City of Soria's Third Equality Plan (2021-2025) as its central framework.

The initiative aims to mainstream Sustainable Development Goal 5 (Gender Equality) in all municipal actions, linking it directly to the rest of the Sustainable Development Goals, so that progress in equality becomes a structural element of the city's sustainable development.

This approach is based on the premise that the **reduction of gender gaps** is essential in all areas of social, economic and cultural life, and that it requires conscious, planned and sustained public intervention over time.

The definition of the project's priorities and the design of its actions are based on a **preliminary analysis of the social reality of the municipality**, taking into account: the situation of women in the city, the capacities and resources of the local administration, the contributions of the social agents and groups involved and the opportunities for intervention detected in the diagnosis.

The initiative has been well received by the citizens, highlighting the **consolidation of a stable programme** and the **active involvement** of different social groups in its development.

The project has been developed in the city of Soria through a structured, continuous and diverse programme. The main lines of action include:

**Internal municipal training** and review of administrative documentation with gender mainstreaming (regulations, budgets, contracting, specifications, subsidies and agreements). **International Women's Doc Festival**, as a reference event in film and genre with national and international projection. A series of **events promoting feminism**, featuring workshops, talks and cultural activities. A campaign aimed at **men** to encourage them to **reflect on their internalised machismo**. Cultural programming with a gender perspective integrated in a stable manner in the municipal agenda. Innovative youth activities (urban dance, freestyle, parkour, rap) to work on gender bias. Commemorations of **8M and 25N** in collaboration with women's associations and the social fabric. Measures to **prevent sexist assaults** in nightlife venues and at public events. Campaigns and activities for **visibilisation and empowerment of women**, especially older women. Campaign **"Soria en Concha de Marco"** for the recovery and promotion of the poet.

## Lessons Learned and Best Practices

The development of the project has made it possible to consolidate and establish some lessons learned:

- Intervention from different spheres offers an **improved social awareness of the 2030 Agenda and women's rights**.
- The programme has helped to strengthen internal coordination between municipal areas. Furthermore, the project has helped to effectively integrate a gender perspective into local public policy, create safe spaces and raise awareness at public events, and establish a cultural programme committed to equality.
- At the institutional level, the key lesson has been the **ability to integrate a gender perspective into municipal public administration**. As well as generating tools for measuring impact in relation to the SDGs.
- From a methodological point of view, the project has been based on a non-neutral public policy approach, consciously incorporating gender impact analysis in all actions. It has also supported collaboration with the Urban Agenda 2030 Chair for Local Development, reinforcing the technical basis and the evaluation system linked to the Sustainable Development Goals.
- As an example of best practice, the City Council of Soria is commended for its **ability to develop a replicable model for integrating SDG 5 at the local level**, using culture and public participation as key tools for social transformation.

## Horizon 2030

Soria City Council will continue to advance in the integration of the 2030 Agenda in its public policies, reinforcing the mainstreaming of gender equality in all municipal areas. The 2030 horizon is proposed as a strategic framework to consolidate an inclusive, sustainable and cohesive city model, in which equality, citizen participation and innovation in public policies act as the axes of social transformation.

This model aims to consolidate itself as a structural practice within the City Council, with the capacity to adapt and transfer to other territories within the framework of the Urban Agenda and the 2030 Agenda.

# European Western Border Anti-Discrimination Monitoring Centre

**COLECTIVO CA-MINANDO FRONTERAS**

Madrid, Andalusia, Canary Islands, Balearic Islands and Murcia

Image courtesy of Caminando Fronteras

The **Caminando Fronteras Observatory** was created in 2015 to protect the human rights of migrants on the western border of Europe and Africa, based on the demands of migrants and their families. Over the years, European borders have become places where rights are systematically violated: migrants die or disappear, and their families are left helpless in the absence of information and institutional support. **The Observatory responds to this vacuum from civil society**, placing migrant communities and victims' families at the centre as subjects of rights and protagonists of the process.

This project integrates **three complementary areas of work**: direct intervention with migrant populations at risk, applied social research, and political and social advocacy actions in collaboration with public and civil society actors. Using a **Participatory Action Research (PAR)** methodology with a feminist, anti-racist and transcultural approach, the overall aim is to contribute to the improvement of public migration policies in the context of Europe's western border, whilst fully respecting human rights.

The project has involved the following activities:

- **Warning and rescue system at sea:** The collective operates 24/7 hotlines that receive alerts from vessels at risk and coordinate the response with the Maritime Rescue services, the Guardia Civil (CCRC Canarias) and the coordination centres in Morocco, Algeria, Senegal and Mauritania.
- **Accompanying families of border victims:** Border victims are not just data; they have families looking for them. In the absence of any institutional response, the Observatory attends to the families of people who have died or disappeared along the migration route. The accompaniment includes mediation at police stations, translation, formalising complaints, taking DNA samples, arranging the repatriation of remains and, in some historical cases, sending the deceased's personal belongings to the families.
- **Intercultural mediation and access to rights:** Psychosocial and legal assistance was provided in 40 cases, protecting the rights of 90 people in territories such as El Hierro, Lanzarote, Gran Canaria, Tenerife, Fuerteventura, Ceuta, Murcia, Valencia, Almeria, Madrid and Catalonia.
- **Networking and best practice:** In Murcia, Madrid, Ceuta, El Hierro and Mallorca, the project team held meetings and encounters with 42 entities, including international bodies, public administrations and civil society organisations, working in border contexts and human rights protection.
- **Publication of reports and public awareness-raising:** Two monitoring reports were published: the monitoring of the first five months of 2024 and the Annual Report 2024, presented at the Instituto Cervantes in Madrid.

## Lessons Learned and Best Practices

The project has established a set of best practices that define the value of the observatory.

- **Participatory action research** in emergency contexts. Migrants and victims' families are not passive beneficiaries, they are co-authors of the project. Migrants and the victims' families are not passive recipients; they are active contributors to the project.
- Coordination and mediation between public actors and civil society is fundamental in locating and rescuing people alive.
- The **Observatory reports** are recognised as a reliable source and used by media, universities and national and international organisations and contribute to the SDG 10.7.3 compliance indicator (number of people who died or disappeared in the process of migrating to an international destination).
- The project has generated **unprecedented institutional reparation measures:** dignified burials with the presence of public representatives, handing over personal effects to the families or restitution of photographs of the deceased's telephones as a last remembrance.

## Horizon 2030

Caminando Fronteras is orienting its work towards a scenario in which borders cease to be spaces of rights exceptions. With a view to 2030, the Observatory will continue to develop its independent monitoring function, unique in Spain in terms of methodology and scope, in order to nurture public migration policies that guarantee the right to life, the right to international protection and the right of families to truth, justice and reparation. The collective will continue to weave multi-stakeholder and multi-level networks to translate the Observatory's data into real structural changes, and to meet SDG targets 10.7 and 16.1: safe migration with full respect for human rights, promoting peaceful and inclusive societies.

# Espacio X Derechos (XDS)

CONVIVE FUNDACIÓN CEPAIM (FUNDACIÓN CEPAIM ACCIÓN INTEGRAL CON MIGRANTES)

Nationwide

Image courtesy of the CEPAIM Foundation

**XDS – Espacio por Derechos** is an initiative aimed at reflection, awareness-raising and political and social advocacy on human rights, within the framework of the United Nations 2030 Agenda, the Sustainable Development Goals (SDGs) and the National Strategy for Sustainable Development 2030.

The project was conceived with the firm conviction that the 2030 Agenda provides a cross-cutting framework for improving the circumstances of vulnerable groups, particularly migrants.

The main axes of the project focused on: **Political advocacy**, both at national and European level; in **communication**, through a newsletter that shows the interest of a significant part of society in political processes; in the **generation of spaces for dialogue** through discussion groups involving civil society, academia and decision-makers; and in the creation of a **repository of Best Practices** from academia, civil society and business.

These axes have been translated into the following milestones and results: **4 policy notes**, a **shadow report on the Voluntary National Review**, a **guide on the implementation of the SDGs** (produced in collaboration with the University of Comillas, Madrid), a report on **Alternatives to Migrant Detention** carried out with *International Detention Coalition (IDS)*. In addition, a repository of **Best Practices** was created online. Holding three **high level panels in Madrid**, on Alternatives to Detention, Climate Migration and Agenda 2030. The **participation in national and international forums**, such as the International Conference on Financing for Development held in Seville, among others.

The **campaign** “*Are social problems the fault of the 2030 Agenda? Don’t be fooled!*” was developed, which received the **Human Rights Award of the Spanish Bar Association** in the “Communication” category.

## Lessons Learned and Best Practices

The key **lesson** was the confirmation that working on the 2030 Agenda from a **cross-cutting perspective**, as proposed by the Sustainable Development Strategy, is one of the most effective ways of improving the situation of vulnerable groups

Along these lines, it was also significant to note that there are numerous public authorities, businesses, civil society organisations and individuals who use the **SDGs as a driving force behind their actions**.

The quantitative results reflect this reality. The 18,317 subscribers to the newsletter on LinkedIn show that there is a **real interest in having spaces for dissemination** and analysis of current political events linked to sustainable development. For its part, the shadow report to the voluntary national review was collected on the Parallel reports portal of the *Major Group & other stakeholders*<sup>1</sup>.

As far as our organisation is concerned, best practice also involves giving a **voice to the young people and migrant communities** we work with, by involving them both in reviewing best practices and in drafting the guide on the SDGs.

The **campaign’s** success: *Are social problems the fault of the 2030 Agenda? Don’t be fooled!* show that there is a space to generate positive and informative content on the 2030 Agenda, as well as a real interest on the part of citizens, which points to the importance of continuing to take advantage of and strengthen this type of initiative.

## Horizon 2030

XDS – *Espacio por Derechos* is a tool made available to the community and public administrations to promote dissemination, shared debate and inspiration based on good practices linked to the 2030 Agenda. Now in its second year, the project is structured around two key areas: firstly, accelerating the improvement of sustainable development indicators between now and 2030 through networking and collaboration among stakeholders, with the aim of improving conditions for vulnerable groups; and, on the other, the **creation of a space for reflection** on how to ensure the principle of leaving **no one behind** remains central to discussions on the post-2030 sustainable development framework.

<sup>1</sup>A network of volunteers that mobilises civil society and facilitates its meaningful participation in the review of the UN 2030 Agenda, particularly in the High-Level Political Forum on Sustainable Development.

# BITaminadas

## Girls Leading Change through Video Games II

FUNDACIÓN ESPLAI: CIUDADANÍA COMPROMETIDA

Nationwide

Image courtesy of Fundación Esplai

BITaminadas stems from the organisation's experience in **promoting careers** in technology among girls and young women through the *#ChicasInTech* project, which aimed to highlight female role models in the tech sector. Recognising the need to move towards training proposals with social impact, the first edition of BITaminadas offered a project-based learning methodology that combined the acquisition of technological skills, through Python programming, with awareness of the Sustainable Development Goals (SDGs). This holistic approach sought to link technical learning with the generation of positive community impact.

In its second edition, **BITaminadas consolidated its learning methodology**, emphasising the value of working in diverse teams and understanding the different professional profiles present in the technology industry. Video game development was used as a learning context, reinforcing the emphasis on the social impact of technology and promoting awareness of the importance of diversity in the sector.

The programme was articulated through a network of social entities located in different parts of Spain, which implemented the activities following the same process:

- **Training for instructors.** Each participating social entity selected, among its professionals, the reference persons in charge of delivering the training. These professionals received a 20-hour online training, in which they were familiarised with the learning methodology and the technological tools of the project.
- **Training for girls aged 12 to 17 at risk of social exclusion.** Once a group of approximately 12 participants had been formed, a training itinerary was developed that included: video game creation with Unity; programming a 2D video game using PixelArt; Sustainable Development Goals, Agenda 2030 and educational applications of video games; creative development and challenge resolution; and transversal competences, group project development and implementation.
- **Awareness-raising for families.** Information and training sessions were held for families, addressing both the positive benefits of the training in which the young women participated and the content and goals of the 2030 Agenda.
- **Social mentoring programme.** Optionally, the group trainings were complemented with a social mentoring process, in which each participant could have individual sessions with a professional woman from the technological field, aimed at fostering the participant's STEAM vocation.
- **Dissemination events.** At the end of the trainings, closing events were organised to disseminate the results of the project, highlighting the participants as the protagonists of their own learning.

## Lessons Learned and Best Practices

The qualitative findings show that the participants' **empowerment** was enhanced by the presence of visible female role models, generating greater interest and a sense of capability in STEAM<sup>2</sup> subjects, although some mentors required further support to build their confidence and maximise their impact. It was also evident that the effectiveness of the project depended on having adequate technological infrastructure and a progressive pedagogical design, adapted to the learning pace of adolescent girls.

Furthermore, the implementation of BITaminadas helped to establish a number of **best practices** within the organisation. Among these, it highlighted more effective **coordination** with other organisations, particularly regarding the collection of evidence, and progress towards ensuring the project's long-term viability beyond the funding period, by guaranteeing the accessibility of the content. The **inclusion of families** proved to be a key element, favouring a more systemic intervention. Finally, the project generated a significant impact on the entities, by training **profiles capable of leading** the technical and training part, thus strengthening the implementation capacity and ensuring the continuity and replicability of the experience.

## Horizon 2030

*Fundación Esplai Ciudadanía Comprometida* aims to build a fairer and more inclusive digital society, where all people are guaranteed their digital rights and can develop full life projects. It focuses on people in vulnerable situations and third sector organisations, prioritising the integral development of young people, participation in collaborative networks and the creation of equitable opportunities. Its action is aligned with the Sustainable Development Goals and the 2030 Agenda.

<sup>2</sup>Science, Technology, Engineering, Arts and Mathematics.

# Project to Develop a Feminist Model to Combat Gender-Based Sexual Violence in Spain

FUNDACIÓN PARA LA CONVIVENCIA ASPACIA

Nationwide

Image courtesy of Fundación para la Convivencia Aspacia

In 2024, the *Fundación para la Convivencia ASPACIA*, a feminist organisation specialising in the prevention and comprehensive care of sexual violence, set out to create a feminist model for tackling such violence, drawing on its own best practices and experiences, as well as those of other organisations and experts, from a clear feminist, human rights and intersectional perspective.

As part of this work, the foundation has launched a range of initiatives focused on research, exchange and knowledge-building, with the aim of raising awareness of sexual violence as a form of gender-based violence and a violation of women's human rights.

Building on this previous work, it was recognised that there was a need to **examine in greater depth institutional responses, obstacles, best practices and social challenges in relation to sexual violence.**

Against this backdrop, the project was launched with the aim of helping to strengthen policies and responses to sexual violence, by promoting the development of a comprehensive approach based on international human rights standards and aligned with the Istanbul Convention, CEDAW and the 2030 Agenda for Sustainable Development, particularly SDG 5 on gender equality.

To develop the model, **a qualitative and participatory methodology** was designed and implemented in collaboration with organisations, associations and specialist bodies from various autonomous communities operating at both regional and national levels, as well as with experts in gender-based violence and sexual violence.

The project developed research aimed at **constructing a feminist model for a comprehensive approach to sexual violence** in the areas of prevention, specialised comprehensive care, access to justice and research for advocacy.

In the first phase, a documentary review of international standards, regulations and public policies related to sexual violence was carried out, with special attention to the **Istanbul Convention** and the Law on the Comprehensive Guarantee of Sexual Freedom. The Delphi method was also applied with 32 experts to identify and agree on criteria for defining good feminist practices in addressing sexual violence. In a second phase, interviews were conducted **with 18 female experts** and representatives of organisations.

In addition, **five regional meetings** were organised and held in collaboration and coordination with specialist organisations working with Fundación Aspacía.

The Regional Meetings were held in Madrid; in Barcelona, in collaboration with AADAS and Héliá; in Pamplona, with Lunes Lilas; in Valencia, with the Asociación Por Ti Mujer; and in Seville, with the Asociación de Mujeres Supervivientes and the Federación de Asociaciones de Mujeres Arena y Laurisilva de Canarias.

To mark the conclusion of the process and to present the main findings of the project and the proposal for the Feminist Model for a comprehensive approach to sexual violence in Spain, **a national conference was held in Madrid**, attended by representatives from the various organisations specialising in sexual violence that had been involved in implementing the project.

The results of this process allowed for the systematisation of lessons learned and the elaboration of the first feminist model for a comprehensive approach to sexual violence, validated collectively. This is to contribute to compliance with the current regulatory framework on sexual violence.

## Lessons Learned and Best Practices

The development and implementation of this project have highlighted the **importance of promoting and fostering collective processes** for the exchange of experiences and the identification of best practices with specialist organisations and experts in sexual violence. This enables us to establish a **common framework for understanding how to address sexual violence comprehensively** from a feminist perspective, as well as to make recommendations for advocacy work with public institutions that have a duty to prevent, respond to, investigate, and guarantee access to justice and reparation for survivors from a gender, human rights and intersectional perspective in Spain.

We can therefore conclude that, through the project to develop a feminist model to combat sexual violence in Spain, we have succeeded in **laying the foundations** for the creation of a model for a comprehensive approach to sexual violence from a feminist perspective and a gender-based approach, human rights and intersectionality at a national level, working collectively with civil society organisations, thereby promoting the coordination of civil society in the fight against sexual violence in Spain.

## Horizon 2030

Looking ahead to 2030, we hope to continue working collectively, in collaboration with the organisations that have been part of this process and alongside others that may join us, to develop a feminist model for a comprehensive approach to sexual violence in Spain, strengthening coordination and strategic alliances between civil society organisations, and with public institutions that have a duty to comply with the current regulatory framework and uphold the rights of survivors, thereby making a tangible contribution to the prevention and eradication of sexual violence in Spain.

# Without us there will be no peace

## MOVIMIENTO POR LA PAZ, EL DESARME Y LA LIBERTAD

Andalusia, Castile-La Mancha, Catalonia, Melilla, Valencia and La Rioja

Image courtesy of Movimiento por la Paz, el Desarme y la Libertad

The *SDG 5 - Without us there will be no peace* project is part of the Movimiento por la Paz's commitment to energising the 2030 Agenda and, in particular, Sustainable Development Goal 5, which focuses on **gender equality and the empowerment of women and girls**.

Its initial objective was to encourage citizens' commitment to gender equality by promoting the empowerment of women as agents of change. Against this background, the initiative stems from several considerations: 1) the need identified by the organisation to strengthen the **meaningful participation of all women**, particularly those in vulnerable situations, in forums for social consultation and political decision-making; women whom we have been supporting for over 10 years through our Women's Department; 2) the identified urgency to intensify, in the face of the rise of reactionary positions, **the commitment of young people in particular to the drive for gender equality**; 3) the imperative to **offer greater opportunities for professionals** in the third sector for their continuing professional development and to facilitate their participation in political advocacy processes.

The project was structured around a **participatory, process-oriented and multi-stakeholder approach**, driven by the Movimiento por la Paz's own geographical reach. This led to collaboration between women in vulnerable situations, social workers and educational communities, with whom work was carried out in separate yet ultimately converging forums, culminating in the collection of their proposals for public policies to advance the achievement of SDG 5.

This journey was developed in three phases, in an attempt to generate processes of social transformation based on the real experiences and needs of the different participants involved:

**Phase 1. Information and training:** Information and training workshops were held on the progress made at that time towards achieving the targets under SDG 5 in the Spanish context and their impact on the lives of women and girls, as well as on tools for analysing gender-based violence.

**Phase 2. Awareness-raising actions:** Through photography and meme competitions (“Realities in transformation”), which made it possible to make these forms of violence visible and to demand their necessary overcoming from the voices of women and young people committed to social change in a feminist perspective. The first of these led to the creation of the exhibition ‘Free and Diverse Women’. It was also within this framework that the **15th Film Festival for Peace** took place, providing a space for multifaceted dialogue and a collective expression of the concerns raised by the existence of gender-based violence, through collective action aimed at building a world free from such violence.

**Phase 3. Social and political advocacy initiatives aimed at bringing about change.** Meetings focused on the collection of proposals for public policy recommendations made by all the actors involved in the process and aimed at energising the achievement of the goals that make up SDG 5. These were followed by institutional launch events to present the findings of the report from the previous consultation.

## Lessons Learned and Best Practices

The **participatory, bottom-up approach** has fostered the genuine empowerment of the women involved, enabling their experiences and perspectives to be translated into concrete policy proposals.

The combination of training, awareness-raising and advocacy has proven to be effective because of its logical step-by-step approach in generating **sustainable changes in attitudes and behaviours**.

Another key lesson learned is that the involvement of a wide range of stakeholders (the education sector, women affected by violence, civil society in the broadest sense, the third sector and public institutions) has helped to strengthen the impact and potential sustainability of the initiatives.

In addition, the use of creative tools (photography, memes, film) has facilitated the connection with youth audiences and broadened the reach of the message.

Notable examples of established best practices include:

- **Mainstreaming a gender perspective** across all activities.
- Use of **feminist and accessible communication** strategies, linked to the channels and language used by young people (meme competition).
- Creating **safe spaces for women in vulnerable situations to participate**.

## Horizon 2030

Looking ahead to 2030, the *Movimiento por la Paz* is focusing its efforts on consolidating participatory processes that promote gender equality as a central pillar of sustainable development. The organisation seeks to strengthen its advocacy work based on evidence and citizens’ experiences, broadening multi-stakeholder alliances and reinforcing its territorial impact. It also prioritises the integration of feminist, inclusive and sustainable approaches in all its interventions, contributing to a more just, peaceful and egalitarian society in line with the 2030 Agenda.

# CROSS-CUTTING CHALLENGE

**COMPREHENSIVE SYSTEM FOR  
SUSTAINABLE DEVELOPMENT  
POLICY COHERENCE**

# Support network for the municipalities of the province of Albacete

## DIPUTACIÓN PROVINCIAL DE ALBACETE

### Albacete

Image provided by the Diputación Provincial de Albacete

La Diputación de Albacete has been working since the year 2000 developing lever policies towards sustainability in different areas. First with Agenda 21, and now with A2030, as UN-driven international frameworks.

The aim of this project was to create a **support network** for those town councils in the province of Albacete that had a local action plan or needed to draw up one. To this end, a network of technicians was created to help boost participation in these projects in order to localise the 2030 Agenda and involve the different local actors.

The **local action plans** are a very effective tool for working in the territory on problems associated with the rural environment, such as depopulation, the reduction of material and human resources, the ageing of the population, among others. They allow the development of specific measures to focus on sustainability in its broadest vision. Furthermore, the aim was to revitalise and promote the Local 2030 Agendas of the municipalities in the Albacete region, by involving key local stakeholders in the implementation of the projects, who may not be aware of their social responsibility as groups.

For this purpose, a methodology based on the following was used:

- Generating **multi-stakeholder** partnerships.
- **Involvement and joint efforts** by the provincial administration, local authorities and the university through the Albacete Provincial Sustainability Observatory (OPSA).
- Making trained staff available to municipalities, whose role would be **to inform, energise and localise** the SDGs and the 2030 Agenda in the municipality and in their action plans.

In order to address this situation and create a support network for municipalities with less than 20,000 inhabitants, the following activities were carried out by the **Diputación de Albacete**:

- Recruitment of staff to carry out **technical assistance** to the participating municipalities. A public consultation was carried out among the 83 candidate municipalities.
- **Specific training** was provided to the staff members hired, delivered by the **Albacete Provincial Sustainability Observatory (OPSA) (UCLM and the Provincial Council)**.

The specific work carried out by the network of technicians is as follows:

- To raise awareness and inform the local council, as well as social and business groups within the municipality, of the **significance of the 2030 Agenda and the commitments** it entails at local level.
- To present to the local corporation and citizens the annual municipal sustainability report.
- To support the municipality in holding meetings with participatory bodies.

## Lessons Learned and Best Practices

Through the implementation of this project, the Diputación de Albacete has identified the following issues:

- Municipalities with less than 20,000 inhabitants require advice and support on localisation issues of the 2030 Agenda. This support in the form of advisory staff has positive effects in the field of local politics, as it brings citizens closer to municipal politics.
- This type of project allows the creation of a **concrete management culture** focused on sustainability, providing tools and guidelines to local entities for their organisation, the systematisation of information, projects and plans.
- The **investment** made in providing local entities with this support network has a **positive return to society** because it allows the establishment of synergies and dynamics of local management with greater citizen involvement, while improving knowledge about the SDGs and their reflection in local policy.
- This work has raised interest and awareness among participants who have decided to renew or update their localisation plans.
- Following training and information sessions for local authorities and the public, momentum has built up around carrying out projects aligned with the SDGs and implementing the 2030 Agenda at local authority level. This has led to an increase in the number of local councils applying for funding under the 2030 Agenda at provincial and regional level, with 73 projects accepted at provincial level and 32 at regional level.

## Horizon 2030

The Provincial Council together with OPSA seek to strengthen the use of this “A2030” sustainability policy planning tool at the municipal level with the promotion and improvement of localisation plans, raising awareness of the long-term view with a real democratic and participatory governance, focusing on the coherence of their actions and the consolidation of participatory processes, with local data analysis and the assistance of the Observatory with the Provincial Council.

# Alianza 2030

## Transforming the province of Cordoba to face challenges and prioritise actions in its Sustainable Development

DIPUTACIÓN DE CÓRDOBA

Province of Cordoba

The **Alianza 2030** is conceived as an innovative initiative of the Provincial Council of Cordoba, leading its role as a key player among the local entities of the province, in the implementation of the 2030 Agenda and its SDGs, from its competences in the provincial territory. The initiative incorporates the best available methodology (the 2030 Agenda Localisation Guide, the Spanish Action Plan for the implementation of the 2030 Agenda and the Spanish Strategy for Sustainable Development 2030), to use various administrative tools to facilitate the process whereby the 2030 Agenda's specific, agreed-upon commitments accelerate efforts to **transform the province of Córdoba**, enabling it to **tackle challenges and prioritise actions** in its sustainable development.

Its initial aim is to draw up and reach consensus on a **Multi-stakeholder Action Plan** for the implementation of a Provincial Sustainable Development Strategy 2030 and the Local 2030 Agendas of those municipalities that wish to participate. This main objective is translated into three specific objectives:

- Establish a Provincial Multi-Stakeholder Plan for the implementation of the 2030 Agenda, building on the 2030 Partnership.
- Continuous improvement in the use of the five tools for the implementation of the 2030 Agenda.
- Support for local authorities in the province.

The **following activities** have been carried out in the implementation of this project:

- Drafting, layout and approval of the revised version of **Participamos Dipucordoba 2030**.
- Creation of the **Provincial multi-stakeholder network** of SDG promoters, through the web platform of the Cordoba Provincial Council's Alliance 2030 theme.
- Communication of the start of the **Alianza 2030 Project** to the Cordoba Network of Municipalities towards Sustainability and the Sustainability Observatory of the Province of Cordoba.
- Innovation of a Multi-stakeholder Implementation Plan of the Sustainable Development Strategy 2030 for the province of Cordoba.
- Launching of processes for the elaboration of Implementation Plans for Sustainable Development Strategies 2030 and Mandate Action Plans in the Cordoba Provincial Council and 33 municipalities participating in the project.

Also noteworthy is the **provincial meeting of the Cordoba Network of Municipalities for Sustainability**, the workshops on **active listening and social media**, the **training course for local politicians and technical staff**, the integration and visibility of the leverage policies promoted by the Cordoba Provincial Council in the province within the Local 2030 Agendas, support in the use of the five tools for implementing the 2030 Agenda, and the **Assembly of the Cordoba Network of Municipalities on the 2030 Agenda**.

## Lessons Learned and Best Practices

Through this project, the Cordoba Provincial Council has been able to establish the following learning outcomes: Thanks to the launch of the [www.agenda2030.dipucordoba.es](http://www.agenda2030.dipucordoba.es) platform, **SDG promoters in the province of Córdoba have been identified, engaged and trained**.

Another initiative that has helped to drive the project forward is the multi-stakeholder campaign to raise awareness and provide training and capacity-building on the 2030 Partnership, with a view to clarifying the meaning of the 2030 Agenda and its SDGs.

The implementation of a series of **pilot experiences** with public institutions (UCO and Loyola University, the business sector, 24 educational centres, civil society groups, among others) has made it possible to generate a **multi-stakeholder alliance** in the province of Cordoba. As well as generating a 2030 Alliance driving group, with 36 participants.

The technical accompaniment through three levels of instruments has generated innovative results, with the participation and collaboration of the Barcelona Provincial Council in support of the definition and approval, for its multi-stakeholder promotion.

In addition, a technological update procedure has been established that enables the swift, standardised and rapid multi-stakeholder integration of any new measures or amendments to existing ones across the three planning levels of the 2030 Sustainable Development Strategy.

This has accelerated the process of identifying the 2030 Agenda from the public services that are provided on a daily basis, but identified as Sustainable Development, due to their **localisation and alignment with the SDGs**.

## Horizon 2030

It will continue to disseminate the results of the Alianza 2030 Project that have continuous impacts on the localisation and alignment with the SDGs specific multi-stakeholder SDGs of the province, allowing the continuous updating of the administrative tools that are used in it, as well as with the participation of stakeholders in the identification of sustainable development that they carry out on a daily basis for the province of Cordoba. Including local voluntary progress reports.
